Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010 by Glock GmbH.
- "GLOCK", "17 Gen4", "USA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 114 mm (4.5") barrel is 186 mm (7.32"), and the average weight, less a box magazine is 625 grams (22 oz.).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number on Glocks manufactured in the U.S.A. consists of a four letter prefix and three numbers.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, and on the lower left grip of the receiver/frame.
-"Officially licensed product of Glock" may be marked on the right side of the frame.

Model

-"GLOCK", "17Gen 4", "AUSTRIA" and calibre is marked on the left side of the slide.
-features include: vertical rear grip serrations, polymer receiver/frame with an integral accessory rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip; frame mounted safety; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
-overall length with a 92 mm (3.6") barrel is 200 mm (7.9"), and the average weight is 767 grams (27 oz.).
-CO2 powered, semi-automatic, blow-back type of action utilizing a detachable 19 shot magazine which contains a 12 gram CO2 capsule inserted in what would be the magazine well of the grip frame.

Manufacturer

- "Umarex USA" is marked on the bottom of the trigger guard.

Action

-CO2 powered, semi-automatic.
-does not discharge a projectile at a muzzle velocity exceeding 152.4mps and/or a muzzle energy exceeding 5.7 Joules.

Serial Number

NOTE: a false serial number marked "KGU417" on the right side of the chamber, and on the slide below the ejection port, was observed marked on several different examples of this model. This number is not to be confused with the serial number.
- The serial number is marked on the underside of the receiver/frame.
- The Serial number is marked on the slide and barrel.

Calibre

- Calibre designation is marked on the dust cover, ahead of the trigger guard.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Shots - Detachable box magazine housed in the grip.

Canadian Law Comments - Does not discharge a projectile at a muzzle velocity exceeding 152.4 mps and/or a muzzle energy exceeding 5.7 Joules.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "17 Gen4" and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "17 Gen4 Cutaway" is an instructional training aid or a demonstration firearm.
- this model has been extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and / or disconnector function to be seen, the left side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- "17 Gen4 Cutaway" is an instructional training aid or a demonstration firearm.
- this Glock model 17 Gen4 is extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right-hand side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and / or disconnector function to be seen, the left-hand side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".
- overall length with a 114 mm barrel is 186mm, and the average weight is 625 grams.

Manufacturer

- "GLOCK" is marked on the firearm as the Glock logo.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number observed consisted of a two letter "JQ" prefix and four numbers.

Calibre

- calibre is marked on the firearm.
- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".

Other Markings

- the slide is marked on the right-hand forward portion:
  WARNING - DANGER
  Cutaway sample - Do not load or fire live ammunition.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Make

- "GLOCK" is normally marked on the firearm.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010.
- approximately 2,500 were manufactured.
- "GLOCK", "17Gen", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "25 YEARS OF GLOCK PERFECTION IN USA" is marked on the top of the slide and inset into the grips on a silver plate.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 114 mm (4.5") barrel is 186 mm (7.32"), and the average weight, less a box magazine is 625 grams (22 oz.).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "GLOCK" is normally marked on the firearm.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port,and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 2017 by Glock GmbH.
- "GLOCK", "17 Gen5", "USA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features: fixed front, dovetailed rear sight that may be night sights; round steel barrel with right hand, hexagonal rifling; flat sided steel slide with right side ejection, vertical rear grip serrations; polymer receiver/frame with an integral accessory rail; squared trigger guard; front strap without finger grooves, rough texture surface finish (RTF) grip, and interchangeable back strap; single trigger with an integral safety lever; ambidextrous slide lock/release; enlarged and reversible magazine release; flared magazine well; Glock proprietary black finish.
- overall length with a 114 mm (4.5") barrel is 202mm (7.95"), and the average weight, with empty magazine is 710 grams (25.04 oz.).

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK Ges.m.b.H" is marked on the right side of the receiver/frame.

Model

- "17 Gen5" is marked on left side of the slide.
- "17 Gen5 Cutaway" is a dedicated training firearm.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" is usually marked on the top of the slide.
- "17 Gen5 Cutaway" has been extensively cutaway to reveal the internal mechanism and its function.
- "17 Gen5 Cutaway" receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".
- Features: flat sided steel slide with front and rear grip serrations; polymer receiver/frame with an integral accessory rail; squared trigger guard; front strap without finger grooves; rough texture surface finish (RTF) grip, and interchangeable back strap; single trigger with an integral safety lever; ambidextrous slide lock/release; enlarged and reversible magazine release; flared magazine well.

Manufacturer

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN AUSTRIA" over "GLOCK Ges.m.b.H" is marked on the right side of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- Serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and is repeated on the slide and barrel. - Serial number of a referenced example consisted of a two letter prefix and four numbers.
Calibre	- The calibre designation is marked on the barrel, visible through the ejection port. - "9x19" is marked on the left side of the slide.
Shots	- Detachable box magazine housed in the grip.

119755 - 2	9MM LUGER	17	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 2001.
- "GLOCK", "17", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "GSSF" over "10 Years of Safe Sport Shooting" over "1991 - 2001" is marked on the slide.
- "17 GSSF 10th Anniversary Commemorative" is a limited-edition run to commemorate the 10th Anniversary of the Glock Sport Shooting Foundation, a group founded by Glock to promote safe pistol shooting.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 625 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - serial number has a four letter "GSSF" prefix and a two letter "US" suffix..
Calibre	- "9x19" is marked on the left side of the slide. - rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 625 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols have become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "GLOCK", "17C", "AUSTRIA" and the calibre are marked on the left side of the slide. - "17C" has a compensated/ported barrel. - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas port cut-outs, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 625 grams. - Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model). - Glock pistols have become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Manufacturer	- "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip. - these pistols were made using Austrian-supplied parts on a receiver/frame that was produced in the United States.
Action	- recoil-operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Shots	- detachable box magazine.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "17C", "Gen4" and the calibre are marked on the left side of the slide.
- "17C Gen4" has a compensated/ported barrel and slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: fixe front, dovetailed rear sight; round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas port cut-outs; right side ejection; rear grip serrations; polymer receiver/frame with accessory rail; squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 625 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.

Manufacturer

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal insert imbedded on the underside of the receiver/frame, in front of the trigger guard.
- serial number is also usually marked on the slide and barrel.
- serial number of a referenced example consisted of a four letter prefix and three numbers.

Calibre

- calibre designation is marked on the barrel, visible through the ejection port.
- calibre designation is also marked on the left side of the slide.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are also available.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1988.
- "GLOCK", "17 L", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "17L" is the Competition version of the Glock model 17.
- "17L" may also be known as "G17L" or "17L Competition".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with a large gas port cut-outs, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 153 mm barrel is 225 mm, and the average weight, less a box magazine is 671 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a two letter prefix, three numbers, and a two letter suffix, eg: "ED572US". Complete serial number was not repeated on the slide and barrel, eg: "ED572".

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, button rifled; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral accessory rail, squared trigger guard; dot size texture surface finish on the grip area; interchangeable grip front and back straps; single trigger with an integral safety lever; ambidextrous slide lock/release; enlarged and reversible magazine release; flared magazine well with front cut-out; black finish.
- overall length with a 114 mm (4.5") barrel is 186 mm (7.32"), and the average weight, less a box magazine is 625 grams (22 oz.).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.

Manufacturer

- "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - serial number of a referenced example consisted of a four letter prefix and three numbers.
Calibre	- "9x19" is marked on the left side of the slide. - rifling characteristics: right hand twist, button rifled barrel.
Shots	- detachable box magazine.

117236 - 4	9MM LUGER	33	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK", "17P" and "AUSTRIA" are marked on the left side of the slide.
- "17P" as it left the factory this is a practice firearm rendered safe for training.
- "17P Practice Pistol" in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.
- "17P Practice Pistol" is intended for law enforcement use only as an inert training instrument.
- features include: plugged barrel with full length chamber; flat sided steel slide with a solid breech face without firing pin hole; red polymer receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action

- 17P Practice Pistol as it left the factory is a practice firearm rendered safe for training.
- 17P Practice Pistol in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number for the Practice Pistol may have a letter "T" prefix.
- the current (2000) methodology is to have a serial number prefix of the letter "T" for all training firearms, this was not always the case.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- 17P Practice Pistol contains a fully functional receiver/frame.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "17R", and "AUSTRIA" are marked on the left side of the slide.
- "R" in the model designation identifies this piece as having a trigger mechanism that "Resets" itself without cycling the action.
- introduced circa 2004.
- "17R" as it left the factory is a "practice firearm" rendered safe for training.
- "17R" is intended for law enforcement use only as an inert training instrument.
- "17R" in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.
- features include: plugged barrel; solid breech face without firing pin hole; deactivated firing pin; red polymer receiver/frame to distinguish this item as a Practice Pistol; the trigger mechanism has been designed to allow the trigger to reset without cycling the action; this pistol is used in conjunction with a Computer Simulator Training System whereby the user inserts a Laser Device into the chamber of the barrel, when the firing pin strikes the inside of the breech face it creates a shock wave that causes the laser to emit a laser light onto the simulator screen.
- as it left the factory, the right side of the slide will be marked as, "WARNING - DANGER / practice sample - do not load / or fire live ammunition".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- 17R Practice Pistol as it left the factory is a practice firearm rendered safe for training.
- 17R Practice Pistol, in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and repeated on the slide and barrel.
- observed serial number consisted of a two letter "PJ" prefix, and four numbers.

Calibre

- the calibre designation is marked on the left side of the slide, eg. "9x19".

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- 17R Practice Pistol contains a fully functional receiver/frame.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "17T" is a dedicated training firearm.
- "17T" receiver/frame is blue in colour.
- "17T" is chambered for the 9MM FX / 9MM FOF or 9MM UTM colour marking ammunition as well as rubber bullets.
- "17T" is built around the Glock Model "17" receiver/frame.
- "17T" may be found with or without accessory mounting rails moulded into the front of the receiver, early samples did not have a hole drilled into the chamber area of the barrel (visible in the ejection port).
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number observed consisted of a letter "T" prefix, five numbers, and a two letter "US" suffix, eg: "T02740US".
- serial number less the "US" suffix was not repeated on the slide and barrel, eg: "T024740".

Calibre

- "9mm FX" or "9mm UTM" is marked on the left side of the slide.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

FRT Report

Firearm Reference Number (FRN): 143766
Make: Glock
Model: 17T Gen4

Summary

Make:	Glock
Model:	17T Gen4
Manufacturer:	Glock GmbH
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Semi-Automatic
Country of Manufacturer:	AUSTRIA
Serial Numbering:	See Note
Legal Classification:	Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
143766 - 1	9MM FX	10	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	
143766 - 2	9MM FX	17	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	
143766 - 3	9MM FX	19	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "17T Gen4" is a dedicated training firearm.
- "17T Gen4" receiver/frame is bright blue in colour.
- "17T Gen4" is chambered for the 9MM FX/9MM FOF colour marking ammunition as well as rubber bullets.
- "17T Gen4" is built around the Glock Model "17 Gen4" receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number has a letter "T" prefix.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre

- "9mm FX / 9mm FoF" was observed marked on the slide.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "17T" is marked on the left side of the receiver/frame.
- "17T Gen4" is a dedicated training firearm.
- "17T Gen4" receiver/frame is bright blue in colour.
- "17T Gen4" is chambered for the 9MM FX/9MM FOF colour marking ammunition as well as rubber bullets.
- "17T Gen4" is built around the Glock Model "17 Gen4" receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Manufacturer

- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Action

- simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number observed consisted of letter "T" prefix and five numbers.
- serial number rationalization is not known.
- do not confuse "U.S. Pat. 8 156 677" with the serial number, this may also be marked on the receiver/frame.

Calibre

- calibre is marked on the firearm.

Shots

- detachable box magazine.

Other Markings

- "WARNING - DANGER"
- "For 9mm FX Ammo only do not load"
- "or fire any other live ammunition"
- is marked on the right side of the slide.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK Ges.m.b.H." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1986.
- "GLOCK", "18", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "18" may also be known as "G18" or "Glock Machine Pistol".
- "18" is designed to be capable of full automatic fire.
- "18" was designed for use by police and military units.
- Glock pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; selector lever is mounted on the left rear side of the slide; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight is 625 grams.

Action

- recoil operated.
- selective fire.

Serial Number

- serial number is located on the underside of the receiver/frame in front of the trigger guard.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK Ges.m.b.H." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1986.
- "GLOCK", "18", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "18" may also be known as "G18" or "Glock Machine Pistol".
- "18" is designed to be capable of full automatic fire.
- "18" was designed for use by police and military units.
- Glock pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; selector lever is mounted on the left rear side of the slide; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight is 625 grams.

Action

- no longer capable of full automatic fire.

Serial Number

- serial number is marked on the receiver/frame in front of the trigger guard.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "18C", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "18C" is the Glock model 18 with a compensated barrel.
- "18C" may also be known as "G18C" or "Glock Machine Pistol Compensated".
- "18C" is designed to be capable of full automatic fire.
- "18C" was designed for use by police and military units.
- Glock pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; selector lever is mounted on the left rear side of the slide; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight is 625 grams.

Action

- recoil operated.
- selective fire.

Serial Number

- serial number is marked on a metal plate attached to the underside of the receiver/frame ahead of the trigger guard.
- observed serial number consisted of a three letters prefix "CHJ", three numbers and two letters suffix "US".

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is marked on the side of the slide.
- the Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- the Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1988.
- "GLOCK, "19", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "19" may also be known as the "G19", "19 Compact Sport", or "19 Compact Service".
- this is a semi-automatic Glock model 19 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.
- Glock pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard.
- serial number of referenced examples consisted of a two or three letter prefix, three numbers and a two letter suffix
- serial number may be partially repeated on the slide and barrel.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available.

Canadian Law Comments

- this is a semi-automatic Glock model 31 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1988.
- "GLOCK, "19", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "19" may also be known as the "G19", "19 Compact Sport", or "19 Compact Service".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard.
- serial number of referenced examples consisted of a two or three letter prefix, three numbers and a two letter suffix. Another example consisted of a four letter prefix and three numbers.
- serial number may be partially repeated on the slide and barrel.

Barrel

- the 124mm is not a factory standard barrel length for this Model. It is, however, an "after-market" barrel in large scale production.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Importer - the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings - the bottom of the grip on the right side will be marked with several patents.

Remarks - Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Make	- "GLOCK" is normally marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Model	- introduced in 1988 by Glock GmbH. - "GLOCK, "19", "USA" and the calibre are marked on the left side of the slide. - "19" may also be known as the "G19", "19 Compact Sport", or "19 Compact Service". - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams. - Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model). - Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Action	- recoil operated.
Serial Number	- serial number is marked on the metal insert on the underside of the receiver/frame, and repeated on the slide and barrel. - serial number on Glocks manufactured in the U.S.A. consists of a four letter prefix and three numbers.
Calibre	- "9x19" is marked on the left side of the slide and on the barrel.
Shots	- detachable box magazine.

Notes

Make

- "GLOCK" is marked on the front left side of the slide in the form of the Glock logo; it also appears at the bottom of the left grip.
- the Glock logo is a large capital letter "G" with the word "LOCK" appearing inside the "G".
- "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.
- "AUSTRIA" is also marked on the left side of the slide.

Model

- introduced in 1989.
- "GLOCK, "19", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "1989 INAUGURAL MODEL" is marked on the front right side of the slide.
- "1989 INAUGURAL MODEL" is preceded by the symbol of the "Fraternal Order of Police" (FOP) which consists of a five pointed star within a circle.
- "19 1989 Inaugural Model" was a limited production by Glock to commemorate the date that the Metropolitan Police Department, Washington, DC, converted from revolvers to the Glock pistol.
- "19 1989 Inaugural Model" was not an official "issue" handgun, it was available to the members of the Washington police force as a private purchase item.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- known example had a three digit number with a two prefix and a two letter suffix. - letter prefixes "FU" and letter suffixes "US" have been observed.
Calibre	- "9x19" is marked on the left side of the slide. - rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK, "19", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "19 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and / or disconnector function to be seen, the left side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned the legal classification of "Prohibited".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" in logo form is marked on the slide and bottom of the grip on both sides.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "19", and "AUSTRIA" is marked on the left side of the slide.
- "Gen3" is not marked on the firearm.
- "Gen3" stands for "3rd generation" and is defined by its characteristics; grip with finger grooves, non-interchangeable backstrap.
- this entry is only intended for the "GLOCK 19" modified by "Full Conceal Inc." that has the grip and trigger guard cut and replaced with a hinged, steel one that permits the folding of the grip/magazine well toward the muzzle.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; fixed front, dovetailed rear sights; flat sided steel slide with right side ejection port and rear serrations; polymer receiver/frame with accessory rail and squared, folding steel trigger guard; finger grooves on the front strap, rough texture surface finish (RTF) grip; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.

Manufacturer

- "Full Conceal Inc." is not marked on the firearm.
- "Full Conceal Inc." modify firearms by cutting the grip and trigger guard that is then replaced with a hinged, steel one that permits the folding of the grip/magazine well toward the muzzle.
- "Full Conceal Inc." modifications give the Glock 19 a rectangular shape footprint of 102mm (4") (h) x 162.56mm (6.4") (l) when folded.
- "GLOCK" in logo form is marked on the slide and bottom of the grip on both sides.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal insert embedded on the underside of the receiver/frame, in front of the trigger guard.
- serial number may be repeated on the slide and barrel.
- serial number of referenced examples consisted of a four letter prefix and three numbers.

Calibre

- "9x19" is marked on the left side of the slide.
- calibre designation is marked on the barrel, visible through the ejection port.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available.
- "GLOCK 19" modified by "Full Conceal Inc." come with a 21 round magazine.

Notes

Make

- "GLOCK" logo is usually marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "19" and "AUSTRIA" is marked on the left side of the slide.
- "Gen3" is not marked on the firearm.
- "Gen3" stands for "3rd Generation" and is defined by its grip characteristics; grip with finger grooves, non-interchangeable backstrap.
- This is a semi-automatic Glock model "19 Gen3" that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.
- "GLOCK" pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Features include: barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection and vertical rear grip serrations; polymer receiver/frame with accessory rail and squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame.

Manufacturer

- "GLOCK" logo is usually marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- Recoil operated.

Serial Number

- Serial number is marked on a metal insert embedded in the underside of the receiver/frame ahead of the trigger guard.
- Serial number is repeated on the right side of the slide and barrel.
- Serial number of a referenced example consisted of four letter and three numbers.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- The calibre designation is marked on the barrel, visible through the ejection port. - The calibre designation is marked on the left side of the firearm.
Shots	- Detachable box magazine housed in the grip.

FRT Report

Firearm Reference Number (FRN): 194182
Make: Glock
Model: 19 Gen3

Summary

Make:	Glock
Model:	19 Gen3
Manufacturer:	Umarex
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Air,Spring or Gas
Country of Manufacturer:	TAIWAN
Serial Numbering:	See Note
Legal Classification:	CC 2 "firearm"/CC 84(3) Exempted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
194182 - 1	BB	16	108	CC 2 "firearm"/CC 84(3) Exempted CC 84(3) (d)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is marked on the airgun as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo is marked on both sides of the slide, on the lower left grip of the receiver/frame, and on the floorplate of the magazine.
-"OFFICIALLY LICENSED PRODUCT OF GLOCK" is marked on the right side of the frame, above the grip.

Model

- this airgun is designed to resemble the Glock model 19 3rd generation firearm.
- "GLOCK", "19", and "AUSTRIA" is marked on the left side of the slide.
-features include: round smoothbore barrel recessed within a mock muzzle that resembles the original calibre barrel; integral fixed front and rear sights; flat sided non-functional metal slide with fake right side ejection port and vertical rear grasping serrations; polymer receiver/frame with an integral accessory rail; squared trigger guard with two phillips screws on right side; finger grooves on the front strap; rough texture surface finish (RTF) grip; removable back strap to access CO2; single trigger with Glock-type trigger safety and integral manually operated cross bolt safety; fake slide lock/release is located on the left side of the receiver/frame; magazine release on left side of grip behind the trigger guard; black finish.
- Overall length is 184mm (7.25"); weight is 0.73kg (1.6lbs).

Manufacturer

- "UMAREX USA, FORTH SMITH, AR" and "MADE IN TAIWAN" is marked on the underside of the trigger guard.

Action

-CO2 powered semi-automatic "double action only"; slide does not move;
-CO2 capsule housed within the grip of the receiver/frame;
-does not discharge a projectile at a muzzle velocity exceeding 152.4mps and/or a muzzle energy exceeding 5.7 Joules.

Serial Number

- marked on a metal plate on the underside of the accessory rail, forward of the trigger guard;
- an observed example consisted of a two letter prefix followed by six numbers.
- NOTE: a false serial number marked "GUW019" on the right side of the fake chamber, and the slide below the fake ejection port, was observed marked on several different examples of this model. This number is not to be confused with the serial number.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- " CAL. 4.5MM (.177)" is marked on the underside of the accessory rail, forward of the trigger guard.
Shots	- detachable box magazine.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 2010.
- "GLOCK", "19Gen", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned the legal classification of "Prohibited".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK", "19 Gen4", "USA" and the calibre are marked on the left side of the slide, with a maple leaf marked on the right side of the slide.
- this is a specially-marked version of the 19 Gen4 made with a 106mm barrel to comply with Canadian barrel length limits.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 106 mm barrel is 189 mm, and the average unloaded weight is 672 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).

Manufacturer

- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil-operated.

Serial Number

- serial number is marked on the metal insert on the underside of the receiver/frame, and repeated on the slide and barrel.
- serial number on Glock 19s manufactured in the U.S.A. consists of a four letter prefix and three numbers.

Model:	19 Gen5
Manufacturer:	Glock GmbH
Level:	Non-Commercial Customization
Type:	Handgun
Action:	Full Automatic
Country of Manufacturer:	AUSTRIA
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
198404 - 1	9MM LUGER	10	102	Prohibited CC 84(1) "prohibited firearm"	Non-Commercial Customization	
198404 - 2	9MM LUGER	17	102	Prohibited CC 84(1) "prohibited firearm"	Non-Commercial Customization	
198404 - 3	9MM LUGER	33	102	Prohibited CC 84(1) "prohibited firearm"	Non-Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- Introduced in 2017.
- "GLOCK", "19Gen5", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- Features include: rifled round barrel; flat sided steel slide with right side ejection, vertical rear grip serrations, and various sight options; polymer receiver/frame with an integral equipment rail, squared trigger guard, front strap without finger grooves, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; ambidextrous slide lock/release; enlarged and reversible magazine release; flared magazine well; Glock proprietary black finish.
- Overall length with a 102 mm (4") barrel is 185mm (7.28"), and the average weight is 711 grams (25.08 oz.).
- The MCO models comes with Optics instead of fixed sights.

Action

- Recoil operated.
- Full-Automatic switch has been installed.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- Serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - Serial number of a referenced example consisted of a four letter prefix and three numbers.
Barrel	- The barrel length does not include any attached device such as flash-hider or muzzle brake.
Calibre	- The calibre designation is marked on the barrel, visible through the ejection port. - The calibre designation is marked on the left side of the firearm.
Shots	- Detachable box magazine housed in the grip.

Notes

Make	- "GLOCK" is marked on the firearm in various places.
Model	- "19 Gen5" is marked on the left side of the slide. - "19 Gen 5" is marked on the underside of the receiver/frame. - This is a CO2 powered BB gun with realistic blowback, designed to resemble a Glock "19 Gen5" manufactured under license by Umarex. - Features include: flat sided slide with front and rear gripping serrations; polymer receiver/frame with an integral accessory rail; squared trigger guard; textured grips; CO2 cartridge housed within the magazine.
Manufacturer	- "UMAREXUSA FORT SMITH, AR." is marked on the underside of the trigger guard.
Action	- CO2 powered. - Velocity is reported 100 mps or 330 fps.
Serial Number	- The serial number is marked on a metal insert on the underside of the receiver/frame. - The serial number of referenced example consists of a three letter prefix followed by six digits.
Calibre	- Calibre is marked on the underside of the receiver/frame. - Calibre of a referenced example was marked as "4.5 mm (.177)"
Shots	- Detachable box magazine housed in the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Canadian Law Comments - Does not discharge a projectile at a muzzle velocity exceeding 152.4 mps and/or a muzzle energy exceeding 5.7 Joules.

Notes

Make

- The company logo is marked on the firearm.
- The company logo consists of the company name "Glock" with a stylized letter "G".

Model

- Introduced in 2025.
- "19 Gen6" is marked on the left side of the firearm.
- The Glock "19 Gen6" is a compact version of the Glock "17 Gen6".
- "Gen6" refers to this model being part of the 6th Glock Generation.
- Features include: front and rear slide serrations; rough textured frame (RTF) ; dual sided takedown lever above the trigger; squared trigger guard; ambidextrous slide release lever with molded guard; reversible magazine release button located on the left side of the receiver/frame; external extractor located on the right side of the slide; extended beavertail backstrap.

Manufacturer

- The company logo is marked on the firearm.
- The company logo consists of the company name "Glock" with a stylized letter "G".

Action

- Recoil operated.

Serial Number

- The serial number is marked on a metal insert on the underside of the receiver/frame.
- The serial number is repeated on other parts and components.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- The calibre designation is marked on the barrel, visible through the ejection port. - The calibre designation is marked on the left side of the firearm.
Shots	- Detachable box magazine housed in the grip. - Designed to accept Glock type magazines.
Importer	- "GLOCK INC. SMYRNA, GA" is marked on the right side of the receiver/frame.
Other Markings	- "Pat.us.glock.com/patent" is marked on the right side of the receiver/frame.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "19 Practice Pistol" as it left the factory is a practice firearm rendered safe for training.
- "19 Practise Pistol" in the factory original condition is incapable of discharging a projectile, however it contains a fully functional model 19 receiver/frame.
- features include: plugged barrel with full length chamber, solid breech face without firing pin hole, red polymer receiver/frame.
- "19 Practise Pistol" is intended for law enforcement use only as an inert training instrument.
- features are very nearly the same as the parent model 19, however the polymer receiver/frame is coloured red to distinguish this item as a Practice Pistol.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- 19 Practice Pistol as it left the factory is a practice firearm rendered safe for training.
- 19 Practice Pistol in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number for the Practice Pistol may have a letter "T" prefix.
- the current (2000) methodology is to have a serial number prefix of the letter "T" for all training firearms, this was not always the case.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- 19 Practice Pistol contains a fully functional receiver/frame.

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- The company logo is marked on the firearm.
- "GLOCK" is marked on both sides of the firearm.

Model

- "19 V" is marked on the left side of the firearm.
- Features include: polymer frame with squared trigger guard; flat sided steel slide; straight front and rear slide serrations; ambidextrous slide locking lever; reversable magazine release button; adjustable optic ready system; ambidextrous take down lever; external extractor visible on the right side of the slide.
- Overall length with a 102 mm (4 inches) barrel is 185 mm (7.28 inches), average weight is 0.61 kg (1.35 lbs).

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- The company logo is marked on the firearm. - "GLOCK" is marked on both sides of the firearm. - "GLOCK, INC., SMYRNA, GA" is marked on the right side of the receiver/frame.
Action	- Recoil operated.
Serial Number	- The serial number is marked on the right side of the firearm. - The serial number is repeated on other parts and components. - The serial number of referenced example consists of four letters followed by three digits.
Calibre	- The calibre designation is marked on the left side of the firearm. - The calibre designation is marked on the barrel, visible through the ejection port.
Shots	- Detachable box magazine housed in the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1988.
- "GLOCK", "19C", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "19C" is the Glock model 19 with a compensated/ported barrel.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "CBS776US". Complete serial number was not repeated on the slide and barrel, eg: "CBS776".

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibres 9mm Luger, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "GLOCK" logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "AUSTRIA" is usually marked on the left side of the slide.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "19M", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "19M" is a variant of the model "19 Gen 4" with some internal part changes.
- "GLOCK" semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection and vertical rear grip serrations; dovetailed sights; polymer receiver/frame with an integral equipment rail; squared trigger guard; interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams.
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "GLOCK" is normally marked on the firearm as the Glock logo.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "GLOCK" logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "AUSTRIA" is usually marked on the left side of the slide.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard.
- serial number of a referenced example consisted of a four letter prefix and three numbers.

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- "GLOCK" logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "GLOCK", "19M" and the calibre are marked on the left side of the slide. - "19M" is a variant of the model "19 Gen 4" with some internal part changes. - "GLOCK" semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection and vertical rear grip serrations; dovetailed sights; polymer receiver/frame with an integral equipment rail; squared trigger guard; interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish. - overall length with a 102 mm barrel is 174 mm, and the average weight, less a box magazine is 595 grams. - Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Manufacturer	- "GLOCK" is normally marked on the firearm as the Glock logo. - "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." is marked on the right side of the receiver/frame.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard. - serial number of a referenced example consisted of a four letter prefix and three numbers.
Calibre	- "9x19" is marked on the left side of the slide. - rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.
Shots	- detachable box magazine. - magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, Ges m.b.h." is marked on the right side of the receiver/frame grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "19P Gen 5" is marked on the left side of the slide.
- "19P Gen 5" as it left the factory is a practice firearm rendered safe for training.
- "19P Gen 5" in the factory original condition is incapable of discharging a projectile, however it contains a fully functional model 19 receiver/frame.
- "19P Gen 5" features a plugged barrel with full length chamber, solid breech face without firing pin hole, red polymer receiver/frame.
- "19P Gen 5" is intended for law enforcement use only as an inert training instrument.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Manufacturer

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, Ges m.b.h." is marked on the right side of the receiver/frame grip.

Action

- "19P Gen 5" as it left the factory is a practice firearm rendered safe for training.
- "19P Gen 5" in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- The serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and is repeated on the slide and barrel.
- The serial number of a referenced example consisted of a letter (P) prefix and six numbers.

Shots

- Detachable box magazine.
- Magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "19R" and "AUSTRIA" are marked on the left side of the slide.
- "R" in the model designation identifies this piece as having a trigger mechanism that "Resets" itself without cycling the action.
- "19R" as it left the factory is a "practice firearm" rendered safe for training.
- "19R" is intended for law enforcement use only as an inert training instrument.
- "19R" in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional model 19 receiver/frame.
- features include: plugged barrel; solid breech face without firing pin hole; deactivated firing pin; red polymer receiver/frame to distinguish this item as a Practice Pistol; used in conjunction with a Computer Simulator Training System whereby the user inserts a Laser Device into the chamber of the barrel, when the firing pin strikes the inside of the breech face it creates a shock wave that causes the laser to emit a laser light onto the simulator screen.
- as it left the factory, the right side of the slide will be marked as, "WARNING - DANGER / practice sample - do not load / or fire live ammunition".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- 19R Practice Pistol as it left the factory is a practice firearm rendered safe for training.
- 19R Practice Pistol in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- serial number is marked on a metal plate attached to the underside of the receiver/frame in front front of the trigger guard.
- observed serial number consisted of a two letter "PJ" prefix and four numbers.
- observed serial number was repeated on the right side of the slide and on the right rear side of the barrel where it is visible through the ejection port.

Calibre

- "9x19" is marked on the left side of the slide.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- 19R Practice Pistol contains a fully functional receiver/frame.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "19T" is a dedicated training firearm. - "19T" receiver/frame is blue in colour. - "19T" is chambered for the 9MM FX/9MM FOF or 9MM UTM colour marking ammunition as well as rubber bullets. - "19T" is built around the Glock Model "19" receiver/frame. - "19T" may be found with or without accessory mounting rails moulded into the front of the receiver/frame; early samples did not have a hole drilled into the chamber area of the barrel (visible in the ejection port). - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
Action	- simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - serial number has a letter "T" prefix.
Calibre	- "9mm FX" or "9mm UTM" is marked on the left side of the slide.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, Ges m.b.h." is marked on the right side of the receiver/frame grip.

Model

- "19T Gen5" is a dedicated training firearm.
- "19T Gen5" receiver/frame is blue in colour.
- "19T Gen5" is chambered for the 9MM FX/9MM FOF colour marking ammunition as well as rubber bullets.
- "19T Gen5" is built around the Glock Model "19 Gen5" receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- "GLOCK" is marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN AUSTRIA" over "GLOCK, Ges m.b.h." is marked on the right side of the receiver/frame grip.
Action	- Simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.
Serial Number	- The serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and is repeated on the slide and barrel. - The serial number of a referenced example consisted of a letter (T) prefix and six numbers.
Calibre	- The calibre designation is in the model name marked on the left side of the slide. - The calibre designation is also marked on the barrel, visible through the ejection port. - "9mm FX / 9mm FoF" is marked on the slide. - "FOF" is the abbreviation for "Force on Force".
Shots	- Detachable box magazine. - Magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Notes

Make

- "GLOCK" is marked on the firearm in various places.
- The company logo is marked on the firearm.

Model

- Introduced in 2020.
- "19X" is marked on the left side of the firearm.
- This airgun is a reproduction of the Glock 19X conventional handgun.
- Features include: flat sided, metal slide featuring front bevels, rear grip serrations and right sided mock ejection port; manual safety within the integral accessory rail located ahead of the serrated square trigger guard; textured, synthetic grip with lanyard loop; magazine release located on the left side of the receiver/frame; ambidextrous action release; medium-brown finish.

Manufacturer

- "UMAREX" is marked on the underside on the receiver/frame.

Action

- Blowback operated.
- CO2 powered.
- CO2 capsule housed within magazine.
- Velocity has been reported as 110 mps or 361 fps.

Serial Number

- The serial number is marked on the underside of the receiver/frame.
- Observed serial number format consists of two letters followed by six numbers.
- NOTE: a false serial number marked "ACWX519" on the right side of the chamber, and on the slide below the ejection port, was observed marked on several different examples of this model. This number is not to be confused with the serial number.

Calibre

- Calibre designation is marked on the underside of the receiver/frame ahead of the squared trigger guard.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Shots	- Detachable box magazine housed in the grip.
Canadian Law Comments	- Does not discharge a projectile at a muzzle velocity exceeding 152.4 mps and/or a muzzle energy exceeding 5.7 Joules.
Other Markings	- "Officially Licensed Product of GLOCK" is marked on the right side of the grip.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1990.
- "GLOCK", "20", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 117mm barrel is 193mm, and the average weight is 785 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a two letter prefix, three numbers, and a two letter suffix, e.g.: "MC296US". Complete serial number was not repeated on the slide and barrel, e.g.: "MC296".

Barrel

- may be fitted with a new 152MM factory drop-in accessory barrel.

Calibre

- calibre is marked on the left side of the slide and on the barrel.
- rifling characteristics in calibre 10MM AUTO: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK", "20", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "20 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen, the left-hand side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- calibre is marked on the slide as "10MM Auto". - rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.
Shots	- detachable box magazine.
Canadian Law Comments	- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2012.
- "GLOCK", "20Gen4", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 117 mm (4.6") barrel is 193 mm (7 5/8"), and the average weight is 785 grams (26.28 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- example observed with a "G" prefix and five numbers.
- example observed with a "XNP" prefix and three numbers.

Calibre

- calibre is marked on the slide and on the barrel.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1990.
- "GLOCK", "20" or "20C", AUSTRIA", and the calibre are marked on the left side of the slide.
- "20C" is the Glock model 20 with a compensated/ported barrel.
- "20C" may also be known as the "G20C".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas ports, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 117mm barrel is 193mm, and the average weight is 785 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a two letter prefix, three numbers, and a two letter suffix, eg: "UW757US". Complete serial number was not repeated on the slide and barrel, eg: "UW757".

Barrel

- may be fitted with a new 152MM factory drop-in accessory barrel.

Calibre

- calibre is marked on the left side of the slide and on the barrel.
- rifling characteristics in calibre 10MM AUTO: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- "SF" in the model designation denotes Short Frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length is 205 mm (8.07"), and the average weight is 780 grams (27.5 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Calibre	- calibre is marked on the left side of the slide and on the barrel.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1991.
- "GLOCK", "21", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 117 mm barrel is 193 mm, and the average weight, less a box magazine is 785 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a two letter prefix, three numbers, and a two letter suffix, e.g.: "UB277US". Complete serial number was not repeated on the slide and barrel, e.g.: "UB277".

Calibre

- calibre is marked on the slide and barrel.
- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK", "21", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "21 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen, the left side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre

- calibre is marked on slide as "45 Auto".
- rifling characteristics: right hand twist, octagonal 1 turn in 400mm.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "21Gen4", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length with a 117 mm (4.6") barrel is 193 mm (7 5/8"), and the average weight is 785 grams (26.28 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix and three numbers.

Calibre

- calibre designation is marked on the barrel, visible through the ejection port.
- calibre designation is also marked on the side of the slide.
- rifling characteristics: right hand twist, hexagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

197766 - 1	45 AUTO	13	117	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- the Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK" and "21 Gen5" are marked on the left side of the slide.
- Glock pistols are available with fixed sights or MOS with Optics
- Features include: under barrel accessory rail.

Manufacturer

- The company logo is marked on the firearm.
- Glock is marked on the firearm in various places.

Action

- Recoil operated.

Serial Number

- The serial number is marked on the right side of the firearm.

Calibre

- The calibre designation is marked on the left side of the firearm.

Shots

- Detachable box magazine.

29391 - 2	45 AUTO	13	117	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1991.
- "GLOCK", "21C", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "21C" is the Glock model 21 with a compensated/ported barrel.
- "21C" may also be known as the "G21C".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round ported steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas port cut-outs, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 117 mm barrel is 193 mm, and the average weight, less a box magazine is 785 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "DXX604US". Complete serial number was not repeated on the slide and barrel, eg: "DXX604".
Calibre	- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm. - calibre is marked on the left side of the slide and on the barrel visible through the ejection port.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2007.
- "GLOCK", "21", "AUSTRIA" and the calibre are marked on the side of the slide.
- "SF" may be marked on the side of the receiver/frame.
- "SF" in the model designation denotes Short Frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 117 mm barrel is 204 mm, and the average weight, less a box magazine is 745 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter "KVT" or "LDZ" prefix, and three numbers.

Calibre

- calibre is marked on the left side of the slide.
- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- Introduced in 1990
- "GLOCK", "22", "AUSTRIA" and the calibre are marked on the left side of the slide.
- This is a semi-automatic Glock model 22 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.
- Glock pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- Features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).

- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
- Overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- The company logo is marked on the firearm.
Action	- Recoil operated. - Capable of full automatic fire.
Shots	- Detachable box magazine.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1990 by Glock GmbH.
- "GLOCK", "22", "USA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial numbers on Glocks manufactured in the U.S.A. consist of a four letter prefix and three numbers.
- other serial numbers observed consisted of a three letter prefix and three numbers.

Calibre

- ".40" is marked on the left side of the slide.
- rifling characteristics: hexagonal, right hand twist.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2002.
- "GLOCK", "22", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "AMERICA'S HEROES" in a banner over "9-11-01", flanked by a New York City Police Department star and a New York City Fire Department shield is marked on the slide.
- 1,000 limited editions of Glock models 17, 21, and 22 pistols were produced to raise funds for the various charities set up to assist the survivors of the September 9, 2001 terrorist attacks in New York City, Washington, D.C., and Pennsylvania.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number range is from "USA2000US" to "USA2999US".

Calibre

- rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

119577 - 3	40 S&W	17	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "GLOCK", "22", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "22 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its method of operation; details of the cutaway are as follows;
- the right-hand side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible; there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen; the left-hand side of the receiver/frame is cutaway to permit the magazine function to be seen,
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- recoil operated.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - observed serial number consisted of a two letter "JQ" prefix, three numbers, and a two letter "US" suffix.
Calibre	- calibre is marked on the side of the slide and on the barrel. - rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.
Shots	- detachable box magazine. - magazines with extended floor plates (plus 2 rounds) are available in calibers 9mm Luger, 40 S&W, 380 AUTO and 357 SIG.
Canadian Law Comments	- this firearm's receiver/frame has not been sufficiently deactivated to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".
Other Markings	- right side of the slide will be marked as follows; "WARNING - DANGER", over "Cutaway sample - do not", over "load or fire live ammunition".
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010.
- "GLOCK", "22Gen4", "AUSTRIA" and the calibre are is marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length is 186 mm (7.32"), and the average weight is 645 grams (23 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- "40" is marked on the left side of the slide.
- rifling characteristics: hexagonal, right hand twist.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010 by Glock GmbH.
- "GLOCK", "22 Gen4", "USA" and the calibre are is marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; dual recoil spring assembly; flat sided steel slide with right side ejection, vertical rear grip serrations, and interchangeable sights; polymer receiver/frame with an integral equipment rail, squared trigger guard, finger grooves on the front strap, rough texture surface finish (RTF) grip, and an interchangeable back strap; single trigger with an integral safety lever; slide lock/release is located on the left side of the receiver/frame; enlarged and reversible magazine release; black finish.
- overall length is 186 mm (7.32"), and the average weight is 645 grams (23 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number on Glocks manufactured in the U.S.A. consists of a four letter prefix and three numbers.

Calibre

- ".40" is marked on the left side of the slide.
- rifling characteristics: hexagonal, right hand twist.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Model

- "GLOCK", "22Gen4", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "22 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its method of operation; details of the cutaway are as follows;
- the right-hand side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible; there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen; the left-hand side of the receiver/frame is cutaway to permit the magazine function to be seen,
- the slide and barrel are extensively cut to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - observed serial number consisted of a two letter "JQ" prefix, and four numbers.
Calibre	- ".40" is marked on the left side of the slide.
Shots	- detachable box magazine.
Canadian Law Comments	- this firearm's receiver/frame has not been sufficiently deactivated to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Restricted".
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2000.
- "GLOCK", "22", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "NRA" is marked on the barrel, slide, and receiver/frame as the prefix to the serial number..
- 750 pistols were produced to raise funds for the National Rifle Association.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter "NRA" prefix and four numbers.

Calibre

- rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1990.
- "22C" is the Glock model 22 with a compensated/ported barrel.
- "22C" may also be known as the "G22C".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel ported barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas port cut-outs, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK INC., SMYRNA, GA." is marked on the right side of the receiver/frame.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter "DYV" prefix, three numbers, and a two letter "US" suffix.

Calibre

- several companies market accessory barrels or conversion units chambered in calibes 22 LR and 357 SIG.
- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- Glock offers a magazine extension that increases the capacity by two shots.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

FRT Report

Firearm Reference Number (FRN): 186345
Make: Glock
Model: 22C

Summary

Make:	Glock
Model:	22C
Manufacturer:	Glock Incorporated
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Semi-Automatic
Country of Manufacturer:	UNITED STATES OF AMERICA
Serial Numbering:	See Note
Legal Classification:	Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
186345 - 1	40 S&W	10	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	
186345 - 2	40 S&W	15	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1990.
- "22C" is the Glock model 22 with a compensated/ported barrel.
- "22C" may also be known as the "G22C".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel ported barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with two gas port cut-outs, right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114 mm barrel is 186 mm, and the average weight, less a box magazine is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "GLOCK INC., SMYRNA, GA." is marked on the right side of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - may have prefix or suffix letters.
Shots	- detachable box magazine.

117237 - 5	40 S&W	17	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- "Glock 22P" is marked on the left side of the slide.
- as it left the factory this is a practice firearm rendered safe for training.
- in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.
- features include: plugged barrel with full length chamber, solid breech face without firing pin hole, red polymer frame/receiver.
- "22P Practice Pistol" is intended for law enforcement use only as an inert training instrument.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- "22 Practice Pistol" as it left the factory is a practice firearm rendered safe for training.
- "22 Practice Pistol" in the factory original condition is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number for the Practice Pistol may have a letter "T" prefix.
- the current (2000) methodology is to have a serial number prefix of the letter "T" for all training firearms, this was not always the case.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9mm Luger, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- "22 Practice Pistol" contains a fully functional receiver/frame.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1990.
- "GLOCK", "23", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "23" may also be known as the "G23", "23 Compact Sport" which has an adjustable rear sight, or "23 Compact Service" which has fixed sights.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "AAN449US". Complete serial number was not repeated on the slide and barrel, eg: "AAN449".

Calibre

- calibre is marked on slide and barrel.
- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "23", and "AUSTRIA" are marked on the left side of the slide.
- "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide.
- "23 Cutaway" is an instructional training aid or a demonstration firearm.
- this model is extensively cutaway to reveal the internal mechanism and its function, details follow:
- the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen, the left side of the receiver/frame is cutaway to permit the magazine function to be seen.
- the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- calibre is marked on slide as "40 S&W".
- rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Prohibited".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010.
- "GLOCK", "23Gen4", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- calibre is marked on the left side of the slide and on the top of the barrel's chamber area.
- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Canadian Law Comments

- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned the legal classification of "Prohibited".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010 by Glock GmbH.
- "GLOCK", "23 Gen4", "USA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number on Glocks manufactured in the U.S.A. consists of a four letter prefix and three numbers.

Calibre

- ".40" is marked on the left side of the slide.
- rifling characteristics: hexagonal, right hand twist.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- The company logo is marked on the receiver/frame.
- "GLOCK" is marked on the right side of the firearm.

Model

- "23Gen4" is marked on the left side of the slide.
- This record is for Glock 23 Gen4 firearms that have been modified with a drop-in, full automatic conversion device mounted to the rear of the slide in place of the slide cover plate.
- Features include: flat sided steel slide with rear grip serrations; polymer receiver/frame with squared trigger guard; slide lock/release and magazine release are located on the left side of the receiver/frame.

Manufacturer

- "GLOCK, INC." is marked on the right side of the receiver/frame.

Action

- Recoil operated.

Serial Number

- Serial number is marked on the underside of the receiver/frame in front of the trigger guard.
- The serial number of a referenced example consisted of three letters followed by three digits.

Calibre

- ".40" is marked on the left side of the slide.
- Rifling characteristics: hexagonal, right hand twist.

Shots

- Detachable box magazine housed in the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Canadian Law Comments - This is a semi-automatic Glock model 30 Gen4 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "23 Practise Pistol" as it left the factory this is a practice firearm rendered safe for training.
- "23 Practise Pistol" in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.
- features include: plugged barrel with full length chamber, solid breech face without firing pin hole, red polymer receiver/frame.
- "23 Practise Pistol" is intended for law enforcement use only as an inert training instrument.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- as it left the factory this is a practice firearm rendered safe for training.
- in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number for the Practice Pistol may have a letter "T" prefix.
- the current (2000) methodology is to have a serial number prefix of the letter "T" for all training firearms, this was not always the case.

Calibre

- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9mm Luger, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1990.
- "GLOCK", "23C", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "23C" is the Glock model 23 with a compensated/ported barrel.
- may also be known as "G23C"
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 600grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "DDV427US". Complete serial number was not repeated on the slide and barrel, eg: "DDV427".

Calibre

- calibre designation marked on the barrel, visible through the ejection port.
- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- Glock offers a magazine extension that increases the shot capacity by two.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1995.
- "GLOCK", "25", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "25" may also be known as "G25".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 570grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- blowback operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- rifling characteristics: right hand hexagonal, 1 turn in 250mm.

Shots

- detachable box magazine.
- Glock offers a magazine extension that increases the shot capacity by two.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1995.
- "GLOCK", "26", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "26" may also be known as, "G26".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with an 89mm barrel is 160mm, average weight is 560 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "CAT324US". Complete serial number was not repeated on the slide and barrel, eg: "CAT324".

Calibre

- "9x19" is marked on the left side of the slide.
- rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibres 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2010 by Glock GmbH.
- "GLOCK", "26", "USA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with an 32mm barrel is 160mm, average weight is 560 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on the metal insert on the underside of the receiver/frame, and repeated on the slide and barrel.
- serial number on Glocks manufactured in the U.S.A. consists of a four letter prefix and three numbers.

Calibre

- "9x19" is marked on the slide and barrel.
- rifling characteristics: hexagonal, 1 turn in 9.84 inches, right hand twist.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "GLOCK", "26", and "AUSTRIA" are marked on the left side of the slide. - "WARNING - DANGER" over "Cutaway sample - do not" over "load or fire live ammunition" may be marked on the right side of the slide. - "26 Cutaway" is an instructional training aid or a demonstration firearm. - this model is extensively cutaway to reveal the internal mechanism and its function, details follow: - the right side of the receiver/frame is cutaway to permit the functioning of the trigger bar to be visible, there is a small cut at the right-rear of the receiver/frame to permit the sear and/or disconnector function to be seen, the left side of the receiver/frame is cutaway to permit the magazine function to be seen. - the slide and barrel are extensively cutaway to permit the functioning of components contained within the slide and the barrel interior to be visible. - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Calibre	- calibre designation "9X19" was observed marked on the left side of the slide.
Shots	- detachable box magazine.
Canadian Law Comments	- this firearm's receiver/frame has not been sufficiently deactivated as to prevent its further use as the master component of a firearm; for this reason this firearm has been assigned to the legal classification of "Prohibited".
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- The company logo is marked on the firearm.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- Introduced in 2010.
- "26Gen4" is marked on the left side of the firearm.
- Overall length with a 88 mm (3 1/2 inches) barrel is 160 mm (6 3/8 inches).
- Features include; rear slide serrations; slide lock lever on the left side; square trigger guard; magazine release on the left side of the grip; finger grooves on the grip

Action

- Blowback operated.
- This pistol has an aftermarket prohibited device installed on the back of the slide that allows the pistol to operate automatically. The prohibited device is a "Glock Style Fire Selector Switch".

Serial Number

- Serial number is located on the underside of the receiver/frame in front of the trigger guard.

Calibre

- The calibre designation is marked on the barrel, visible through the ejection port.
- The calibre designation is marked on the left side of the firearm.

Shots

- Detachable box magazine housed in the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make

- "GLOCK" logo and "26Gen5" and "AUTRIA" and "9x19" was observed marked on the left side of the slide.
- "GLOCK" logo was observed marked on the lower left grip of the receiver/frame.
- "GLOCK" logo and "AUSTRIA" was observed marked on the barrel visible through the ejection port.
- "Glock" logo is a large letter "G" with the word "LOCK" appearing inside the "G".

Model

- "GLOCK 26Gen5 AUSTRIA 9X19" was observed marked on the side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with an 87mm (3.43") barrel is 163mm (6.42"), average weight is 677 grams (23.8 oz).

Manufacturer

- "GLOCK" is normally marked on the left side of the slide as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip embedded into the underside of the receiver/frame in front of the trigger guard, and is usually repeated on the barrel and on the slide.
- serial number observed consisted of a four letter prefix and three numbers.

Calibre

- calibre designation is marked on the left side of the slide and on top of the barrel, viewable through the ejection port.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- The make is marked on the left side of the receiver/frame.

Model

- The model is marked on the left side of the slide.
- Features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.

- Overall length with a 87 mm (3.43 inches) barrel is 163 mm (6.42 inches), average weight is 0.67 kg (1.48 lbs).

Manufacturer

- The manufacturer is marked on the right side of the receiver/frame.

Action

- Recoil operated.

Serial Number

- Serial number is marked on a metal strip embedded into the underside of the receiver/frame in front of the trigger guard, and is usually repeated on the barrel and on the slide.
- Serial number of an observed sample consisted of a four letter prefix followed by a three digit number.

Calibre

- The calibre designation is marked on the barrel, visible through the ejection port.

Shots

- Detachable box magazine housed in the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Canadian Law Comments - This is a semi-automatic Glock model 26 Gen5 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- as it left the factory this is a practice firearm rendered safe for training.
- in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.
- features include: plugged barrel with full length chamber, solid breech face without firing pin hole, red polymer receiver/frame.
- "26 Practice Pistol" is intended for law enforcement use only as an inert training instrument.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.

Action

- as it left the factory this is a practice firearm rendered safe for training.
- in the factory original condition it is incapable of discharging a projectile, however it contains a fully functional receiver/frame.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number for the Practice Pistol may have a letter "T" prefix.
- the current (2000) methodology is to have a serial number prefix of the letter "T" for all training firearms, this was not always the case.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9mm Luger, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "26T" is a dedicated training firearm.
- "26T" receiver/frame is blue in colour.
- "26T" is chambered for the 9MM FX/9MM FOF and 9MM UTM colour marking ammunition as well as rubber bullets.
- "26T" is built around the Glock Model "26" receiver/frame.
- "26T" may be found with or without accessory mounting rails moulded into the front of the receiver/frame.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- simple blow-back operated, utilizing specially designed cartridges that magnifies the recoil impulse.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number may include the letter "T" prefix.

Calibre

- "9mm FX" or "9mm UTM" is marked on the side of the slide.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 1995.
- "GLOCK", "27", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black or two tone finish.
- overall length with a 88 mm barrel is 160 mm, and the average weight, less a box magazine is 560 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of three letter "BXC" prefix, three numbers, and a two letter "US" suffix, eg: "BXC648US". Complete serial number was not repeated on the slide and barrel, eg: "BXC648".
- observed serial number consisted of three letter "FSF" prefix, and three numbers.
- observed serial number consisted of three letter "MZN" prefix, and three numbers.

Calibre

- calibre designation is marked on the left side of the slide.
- calibre designation is also marked on the barrel, visible through the ejection port.
- 40 S&W rifling characteristics: 1 turn in 9.84 inches (250mm), right hand twist.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make	- "GLOCK" is normally marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Model	- introduced in 1999. - "GLOCK", "28", "AUSTRIA". and the calibre are is marked on the left side of the slide. - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with an 88mm barrel is 160mm, average weight is 529grams. - Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model). - Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Manufacturer	- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Action	- blowback operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Calibre	- calibre is marked on the slide and barrel. - rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.
Shots	- detachable box magazine. - magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1997.
- "GLOCK", "29", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "29" may also be known as the model "G29".
- "29" is a compact version of the Glock model "20".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 96mm barrel is 172mm, average weight is 700grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- rifling characteristics in calibre 10MM AUTO: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK", "29", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "SF" in the model designation denotes Short Frame.
- "SF" may be marked on the right side of the receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 96mm (3.78") barrel is 177mm (6.97") the average weight is 695grams (24.52 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- calibre is marked on the slide and barrel.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1997.
- "GLOCK", "30", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "30" may also be known as G30.
- "30" is a compact version of the Glock model 21.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 96mm barrel is 172mm, average weight is 680grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, e.g.: "CDV824US". Complete serial number was not repeated on the slide and barrel, e.g.: "CDV824".

Calibre

- calibre is marked on the slide and barrel.
- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- The company logo is marked on the left side of the receiver/frame at the base of the grip, and may be repeated on the left side of the slide.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside.

Model

- Introduced in 2013.
- "30 Gen4" is marked on the left side of the slide.
- "30 Gen4" is a subcompact size polymer receiver/frame pistol.
- This record is for Glock 30 Gen4 firearms that have been modified with a drop-in, full automatic conversion device mounted to the rear of the slide in place of the slide cover plate.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 96 mm (3.78") barrel is 175 mm (6.88"), and the average weight is 0.675 kg (23.81 oz).

Manufacturer

- The manufacturer is marked on the right side of the receiver/frame.

Action

- Recoil operated.

Serial Number

- Serial number is marked on a metal strip embedded into the underside of the receiver/frame in front of the trigger guard, and is usually repeated on the barrel and on the slide.
- Serial number of an observed sample consisted of a four letter prefix followed by a three digit number.

Calibre

- The calibre designation may be marked on the left side of the slide.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Shots	- Detachable box magazine housed in the grip.
Canadian Law Comments	- This is a semi-automatic Glock model 30 Gen4 that has been modified with the addition of a drop-in, full-automatic conversion device mounted on the rear of the slide that replaces the original rear slide cover plate.

Notes

Make

- "GLOCK" is marked on the firearm as the Glock logo.
- "GLOCK" logo is a large letter "G" with the word "LOCK" appearing inside.
- "GLOCK" logo is usually marked on both sides of the slide and molded in on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "30S" was introduced in 2013. - "30S" is marked on the left side of the slide. - "30S" stands for model "30 Slim". - "SF" may be molded in on the right side of the receiver/frame. - "SF" stands for "Short Frame" as the one use on the Glock model 30SF. - "30S" main feature is the use of Glock model 30SF receiver/frame and a model 36 type slide. - "30S" is a subcompact size polymer receiver/frame pistol. - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, octagonal rifling; fixe front and drift adjustable rear sights; flat sided steel slide with right side ejection and rear grasping serrations; polymer receiver/frame with accessories rail; squared trigger guard; trigger with integral safety lever; no external hammer, striker fired trigger mechanism; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with a 96 mm (3.78") barrel is 177mm (6.97"), overall height is 122 mm (4.8"), overall width is 32.5 mm (1.28"), and the average weight is 0.575 kg (20.28 oz).
Manufacturer	- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard. - serial number is usually repeated on the right side of the slide and barrel.
Calibre	- calibres designation is marked on the left side of the slide. - calibre designation is marked on the barrel, visible through the ejection port. - 45 AUTO rifling characteristics: 1 turn in 15.75 inches, right hand twist.
Shots	- detachable box magazine.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2008.
- "GLOCK", "30", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "SF" in the model designation denotes Short Frame.
- "SF" may be marked on the right side of the receiver/frame.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 96mm (3.77") barrel is 177mm (6.96") the average weight is 675grams (23.8 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number may consisted of a three letter prefix, three numbers, and a two letter "US" suffix.

Calibre

- calibre is marked on the left side of the slide.
- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1998.
- "GLOCK", "31", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "31" may also be known as "G31".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114mm barrel is 186mm, average weight is 655grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- alpha/numeric serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.

Calibre

- caliber is marked on the slide and barrel.
- rifling characteristics: right hand twist, hexagonal 1 turn in 406mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114mm barrel is 186mm, average weight is 655grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number may consisted of a three letter prefix, three numbers, and a two letter "US" suffix.

Calibre

- calibre is marked on the slide and barrel.
- rifling characteristics: right hand twist, hexagonal 1 turn in 406mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Other Markings

- the left hand side of the slide is marked with: Glock's logo followed by the model designation "31C", the country "AUSTRIA", and than the calibre ".357".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 114mm barrel is 186mm, average weight is 655grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols have a large number of accessory items that may alter the pistol's appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Calibre	- calibre designation is marked on the left side of the slide and on top of the barrel, viewable through the ejection port.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1998.
- "GLOCK", "32", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 102mm barrel is 174mm, average weight is 610grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter suffix, eg: "DRC586US". Complete serial number was not repeated on the slide and barrel, eg: "DRC586".

Calibre

- calibre is marked on the slide and barrel.
- rifling characteristics: right hand twist, hexagonal 1 turn in 406mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Importer

- the importer may be marked on the right side of the receiver/frame above the grip as, "GLOCK. INC., SMYRNA, GA.".

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- the company logo was observed marked on both sides of the slide.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1998.
- "GLOCK", "33", "AUSTRIA" and the calibre are marked on the left side of the slide.
- "33" may also be known as "G33".
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 88mm barrel is 160mm, average weight is 560grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number may consist of a three letter prefix, and three numbers.
- serial number may consist of a three letter prefix, three numbers, and a two letter "US" suffix.
- "U.S. Pat. 4,539,889" over "4,825,744" and "4,893,546" may be marked on the right grip.
- "4,539,889", "4,825,744" and "4,893,546" are not serial number, these are U.S. Patent Numbers.

Calibre

- caliber is marked on the slide and barrel.
- rifling characteristics: right hand twist, hexagonal 1 turn in 406mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Other Markings

- "U.S. Pat. 4,539,889" over "4,825,744" and "4,893,546" may be marked on the right grip.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Make	- "GLOCK" is normally marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Model	- introduced 2012 - "GLOCK", "33 Gen4", "AUSTRIA" and ".357" are marked on the left side of the slide. - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with a 87mm barrel is 160mm, overall height is 106mm, and average weight is 560 grams. - Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model). - Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - observed serial number consisted of a three letter "TDU" prefix, and three numbers.
Calibre	- ".357" is marked on the left side of the slide. - rifling characteristics: right hand twist, hexagonal 1 turn in 406mm.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make	- "GLOCK" is normally marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.
Model	- introduced in 1998. - "GLOCK", "34", "AUSTRIA" and the calibre are marked on the left side of the slide. - "34" may also be known as "G34" or "G34SC". - Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism. - Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage. - features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish. - overall length with a 135mm barrel is 207mm, average weight is 650grams. - Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model). - Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance. - Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel. - serial number may consist of a three or four letter prefix, two or three numbers, and a two letter suffix.
Calibre	- calibre is marked on the left side of the slide. - rifling characteristics: right hand twist, hexagonal rifling, 1 turn in 250mm.
Shots	- detachable box magazine. - magazines have been offered with a "Plus 2" floorplate extension that increases the magazine capacity by two cartridges.
Importer	- the importers name will be marked on the right side of the receiver/frame. - located in Symrna, Georgia.
Other Markings	- the bottom of the grip on the right side will be marked with several patents. - the model designation markings on firearms destined for the North American market usually read "34". Units produced for sale in Europe have been noted with the model designation marked as "34SC", denoting "Sporting Competition".
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced 2010
- "GLOCK", "34 Gen4", "AUSTRIA" and "9x19" are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length is 222 mm, and average weight is 650 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number of an observed example consisted of a three letter prefix (VDL) and three numbers.

Calibre

- calibre is marked on the slide and barrel.
- rifling characteristics: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- "GLOCK" and "34 Gen5" are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length is 222 mm (8.74"), and average weight is 650 gr (22.92 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols have a large number of accessory items have become available that may alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- serial number of an observed example consisted of a four letter prefix and three numbers.

Calibre

- calibre designation is marked on the left side of the slide and on top of the barrel, viewable through the ejection port.

Shots

- detachable box magazine.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 1998.
- "GLOCK", "35", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 135mm barrel is 207mm, average weight is 695grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is located on the underside of the receiver/frame, ahead of the trigger guard.
- observed serial number consisted of a three letter "DBD" prefix, three numbers and a two letter "US" suffix, eg: "DBD849US".
- part of the serial number may be repeated on the side of the slide and on the barrel, eg: "DBD849".

Calibre

- calibre was observed marked on the left side of the slide and on the barrel.
- rifling characteristics in calibre 40 S&W: right hand twist, hexagonal 1 turn in 250mm.

Shots

- detachable box magazine.
- magazines with extended floor plates (plus 2 rounds) are available in calibers 9MM LUGER, 40 S&W, 380 AUTO and 357 SIG.

Other Markings

- the bottom of the grip on the right side will be marked with several patents.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

- overall length with a 96mm barrel is 172mm, average weight is 570grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
- observed serial number consisted of a three letter "FKY" prefix and three numbers.
- observed serial number consisted of a three letter prefix, three numbers, and a two letter "US" suffix.

Calibre

- caliber is marked on the slide and barrel.
- rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.

Shots

- detachable box magazine.

Importer

- marked on the right side of the receiver/frame.

Remarks

- Glock's "Safe Action" safeties are:

-1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire.

-2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages.

-3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

FRT Report

Firearm Reference Number (FRN): 121025
Make: Glock
Model: 37

Summary

Make:	Glock
Model:	37
Manufacturer:	Glock GmbH
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Semi-Automatic
Country of Manufacturer:	AUSTRIA
Serial Numbering:	See Note
Legal Classification:	Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
121025 - 1	45 GLOCK AP	10	114	Restricted CC 84(1) "restricted firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 2003.
- "GLOCK", "37", "AUSTRIA" and the calibre are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length is 204 mm, and average weight is 735 grams.
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and repeated on the slide and barrel.
- observed serial number consisted of a three letter "GAE" prefix and three numbers.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- calibre is marked on the slide and barrel. - ".45 G.A.P." is also known as the "45 GLOCK AUTOMATIC PISTOL". - rifling characteristics in calibre 45 GLOCK: right hand twist, octagonal 1 turn in 400mm.
Shots	- detachable box magazine.
Importer	- the right side of the receiver/frame will be marked "GLOCK, INC., SMYRNA, GA.".
Other Markings	- left side of slide is marked: "GLOCK 37 AUSTRIA .45 GLOCK"
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with integral equipment rail and squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 135 MM (5.31") barrel is 226 mm (8.9"), and the average weight is 765 grams (27 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- recoil operated.
Serial Number	- serial number is marked on a metal strip on the underside of the receiver/frame, in front of the trigger guard and may be repeated on the slide and barrel.
Calibre	- caliber is marked on the slide and barrel. - rifling characteristics in calibre 45 AUTO: right hand twist, octagonal 1 turn in 400mm.
Shots	- detachable box magazine.
Remarks	- Glock's "Safe Action" safeties are: -1) TRIGGER SAFETY: trigger safety is incorporated into the trigger in the form of a lever and when in the forward position, blocks the trigger from moving rearward. To fire the pistol, the trigger safety and the trigger itself, must be deliberately depressed at the same time. If the trigger safety is not depressed, the trigger will not move rearwards and allow the pistol to fire. -2) FIRING PIN SAFETY: spring-loaded firing pin safety projects into the firing pin channel and mechanically blocks the firing pin from moving forward. When the trigger is being moved rearwards, a vertical extension of the trigger bar pushes the firing pin safety upwards, clearing the firing pin channel. During the slide cycling process, the firing pin safety automatically re-engages. -3) DROP SAFETY: rear part of the trigger bar, which has a cruciform shape, rests with both arms on the drop safety shelf located in the trigger mechanism housing. When the trigger is pulled to the rear, the trigger bar begins to move down off the shelf until finally separating from the firing pin lug. During the slide cycling process, the trigger bar is lifted and caught by the firing pin lug. The trigger bar is re-engaged by the firing pin lug.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.
- "MADE IN USA" and "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Model

- introduced in 2014.
- "GLOCK", "41 Gen4", and ".45 Auto" are marked on the left side of the slide.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations, and interchangeable sights; polymer receiver/frame with integral equipment rail and squared trigger guard; single trigger with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 135 MM (5.31") barrel is 226 mm (8.9"), and the average weight is 765 grams (27 oz).
- Glock pistols are available with adjustable rear sight (Sport model) or with fixed sights (Service model).
- Glock pistols has become increasingly popular and a large number of accessory items have become available that will alter the pistols appearance.
- Glock pistol accessories include: laser and optical sights; mounting systems; barrels that feature cut rifling and/or compensator ports; extended slide release and magazine release buttons; grip adapters or grip reductions.

Manufacturer

- "MADE IN USA" and "GLOCK, INC., SMYRNA, GA." may be marked on the right side of the receiver/frame, above the grip.

Notes

Make

- The company logo is marked on the firearm.
- "GLOCK, INC." is marked on the right side of the receiver/frame.

Model

- "43" is marked on the left side of the firearm.
- The "Full Conceal Arms/FC Arms" model number for the modification to a Glock 43 is "M3S" which is marked on the bottom of the trigger guard.
- This entry is only intended for the "GLOCK 43" modified by "Full Conceal Inc." that has the grip and trigger guard cut and replaced with a hinged, steel one that permits the folding of the grip/magazine well toward the muzzle.
- Feature include: action release located on the left side on the receiver/frame; magazine release located on the left side of the receiver/frame; folding pistol grip, trigger and trigger guard.

Manufacturer

- The company logo is marked on the firearm.
- "GLOCK, INC." is marked on the right side of the receiver/frame.
- "FC Arms" is marked on the bottom of the trigger guard.
- "Full Conceal Inc." modify firearms by cutting the grip and trigger guard that is then replaced with a hinged, steel one that permits the folding of the grip/magazine well toward the muzzle.
- "Full Conceal Arms/FC Arms" is based in Las Vegas Nevada.

Action

- Recoil operated.

Serial Number

- The serial number is marked on the right side of the firearm.
- The serial number is marked on the underside of the receiver/frame.

Barrel

- The barrel length does not include any attached device such as flash-hider or muzzle brake.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre

- The calibre designation is marked on the left side of the firearm.
- The calibre designation is marked on the barrel, visible through the ejection port.

Shots

- Detachable box magazine housed in the grip.

Notes

Make

- "GLOCK" was observed, on a referenced example, marked on the firearm as the Glock logo.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." was observed, on a referenced example, marked on the right side of the receiver/frame, above the grip.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model

- introduced in 2015.
- "43" was observed, on a referenced example, marked on the left side of the slide.
- "43" is a subcompact, slim line design semi-automatic pistol.
- Glock semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: interchangeable sights; round steel barrel with right hand, hexagonal/polygonal rifling; flat sided steel slide with right side ejection, rear grip serrations; polymer receiver/frame having a squared trigger guard; single trigger mechanism with integral safety lever; slide lock/release and magazine release are located on the left side of the receiver/frame; black finish.
- overall length with a 86 mm (3.39") barrel is 159 mm (6.26"), average weight is 509 grams (17.95oz).

Manufacturer

- "GLOCK" was observed, on a referenced example, marked on the firearm as the Glock logo.
- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." was observed, on a referenced example, marked on the right side of the receiver/frame, above the grip.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal insert imbedded on the underside of the receiver/frame.
- serial number is repeated on the slide and barrel.
- serial number of a referenced example consisted of a three letter prefix and three numbers.

Calibre

- calibre designation is marked on the barrel, visible through the ejection port.
- calibre designation is also marked on the left side of the slide.
- 9MM LUGER rifling characteristics: 1 turn in 9.84 inches, hexagonal, right hand twist.

Shots

- detachable box magazine.

Notes

Make

- "GLOCK" is normally marked on the firearm as the Glock logo.
- Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G".
- Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame.

Model

- "GLOCK", "43X", "AUSTRIA" and the calibre are marked on the left side of the slide.
- introduced in 2019.
- "43X" combines a subcompact slide with a compact size single-stack frame and has all enhancements of a Gen5 model.
- "GLOCK" semi-automatic pistols are equipped with their proprietary "Safe Action" system, which does not use a traditional single action or double action trigger mechanism.
- Glock's "Safe Action" system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: round steel barrel with right hand, polygonal rifling; flat sided steel slide with right side ejection and vertical front and rear serrations; dovetailed sights; black polymer receiver/frame with squared trigger guard; checkered grip; single trigger with an integral safety lever; slide lock/release on left side of receiver/frame; reversible magazine release; matte silver slide finish.
- overall length with an 87mm (3.4") barrel is 165 mm (6.5"), and average weight is 530 grams (18.7 oz).

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- "GLOCK" is normally marked on the firearm as the Glock logo. - Glock logo is a large letter "G" with the word "LOCK" appearing inside the "G". - Glock logo may be marked on both sides of the slide, on the barrel visible through the ejection port, and on the lower left grip of the receiver/frame. - "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." or "GLOCK, INC., SMYRNA, GA." is marked on the lower, right side of the grip.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard.
Calibre	- "9x19" is marked on the left side of the slide and may be repeated on the top of the barrel, viewable through the ejection port.
Shots	- detachable box magazine.

Notes

Make

- The company logo is marked on the firearm.
- GLOCK logo is a large letter G with the word LOCK appearing inside the G.
- AUSTRIA is marked on the left side of the slide.

Model

- GLOCK, 45T, AUSTRIA and the calibre 9mm FX/9mm FoF are marked on the left side of the slide.
- 45T is a firearm purposely manufactured to fire training ammunition.
- T stands for Training.
- 45T receiver/frame is blue in colour with a blue and black two tone slide.
- 45T combines a compact slide with a full size frame and has all the benefits of a Glock Gen5 model.
- Model 45 was made first in Austria and introduced in 2018.
- GLOCK semi-automatic pistols are equipped with their proprietary Safe Action system, which does not use a traditional single action or double action trigger mechanism.
- Glock's Safe Action system is a partly tensioned firing pin/striker, which is moved further back by the trigger bar when the trigger is pulled. When the trigger is pulled, three safety features (trigger safety, firing pin safety, and drop safety) are automatically deactivated one after another. When doing so, the trigger bar is deflected downward by the connector and the firing pin is released under full load. When the trigger is released, all three safety features re-engage.
- features include: vertical front and rear grip serrations; polymer receiver/frame with an integral accessory rail; squared trigger guard; textured grip with the front strap without finger grooves; interchangeable back strap; single trigger with an integral safety lever; ambidextrous slide lock/release; enlarged and reversible magazine release.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- The company logo is marked on the firearm. - GLOCK logo is a large letter G with the word LOCK appearing inside the G. - AUSTRIA is marked on the left side of the slide.
Action	- Blowback operated.
Serial Number	- Serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard. - Serial number is repeated on the right side of the slide and barrel. - Serial number of a referenced example consisted of one letter prefix (T) and six numbers.
Calibre	- The calibre designation is usually marked on the barrel, visible through the ejection port. The calibre designation is marked on the left side of the slide.

Notes

Make

- "Glock" is marked on the left side of the slide.
- The company logo is marked on the receiver/frame.

Model

- "P80" is marked on the left side of the slide.
- "P80" is designed to resemble the original Glock "Pistole 80" manufactured for the Austrian military in the early 1980's, released commercially as the first generation Glock "17".
- "P80" is available exclusively from the firearms distributer "Lipsey's" and is sold with a collectible box, certificate of authenticity and peel-top "Tupperware" style storage container.
- 10,000 were produced in the first release of the "P80".
- Features include: polygonal rifled barrel; flat sided, square profile slide with rear gripping serrations; polymer receiver/frame with squared, integral trigger guard and pebble texture grips; left side slide release; left side magazine release.
- Overall length with a 144 mm (4.49 inches) barrel is 202 mm (7.95 inches), average weight is 0.7 kg (1.55 lbs).

Manufacturer

- "MADE IN AUSTRIA" over "GLOCK, INC., SMYRNA, GA." is marked on the left side of the receiver/frame.

Action

- Recoil operated.

Serial Number

- Serial number is marked on a metal insert on the underside of the receiver/frame, in front of the trigger guard.
- Serial number may be repeated on the right side of the slide and on the barrel visible through the ejection port.
- Serial number observed consisted of four alpha characters followed by three digits.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- The calibre designation is marked on the barrel, visible through the ejection port. - Calibre designation is marked on the left side of the slide. - Calibre was marked as "9x19".
Shots	- Detachable box magazine housed in the grip.

FRT Report

Firearm Reference Number (FRN): 179083
Make: Gobin, Albert
Model: Puppy

Summary

Make:	Gobin, Albert
Model:	Puppy
Manufacturer:	
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Revolver
Country of Manufacturer:	BELGIUM
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
179083 - 1	32 CF	5	39	Prohibited CC 84(1) "prohibited firearm" para. (a)	Non-Commercial Customization	

Notes

Make

- "A. GOBIN ARQr PARIS 108 Bd MAGENTA" or a variation thereof is usually marked on the topstrap or barrel.
- Albert Gobin was a hunting and firearms retailer in Paris, France, at the beginning of the 20th Century, who retailed a variety of (usually Belgian) firearms; he customarily marked the firearms he sold with his address at #108 Boulevard Magenta.

Model

- the model is not marked on the firearm; this is a descriptor of the firearm type.
- this is a Belgian-manufactured standard-pattern "puppy"-style revolver, retailed by Albert Godin during the late 1800s and early 1900s; these are a larger-calibre (32/8mm) version of the "Velo-dog".
- features may include: external hammer or hammerless; ring or folding trigger; blued and colour-case-hardened finish; fluted cylinder; tip-out ejector rod contained in the cylinder axis pin; tip-out loading gate; and bird's-head grip-frame, with wooden or synthetic grips.

Action

- double-action revolver.

Serial Number

- usually serial-numbered on the grip-frame underneath the grips.

Firearm Reference Number (FRN): 120942
Make: Godsal
Model: Rifle Experimental

Summary

Make:	Godsal
Model:	Rifle Experimental
Manufacturer:	Webley & Scott
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Bolt Action
Country of Manufacturer:	UNITED KINGDOM
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
120942 - 1	303 BRITISH	5	762	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make	- on one sample the make was marked on the bolt as "GODSAL".
Model	- the model designation is not marked on the firearm. - on one sample the bolt was marked "GODSAL PATEND No. 22003 DATED 1902". - manufactured circa 1890 to 1910. - this was an experimental rifle designed by Major P.T. Godsal. The rifle can be identified by the rails on top of the wrist stock; as the bolt slides along the rails a cartridge is extracted or chambered. The magazine is located in the stock behind the trigger. The buttstock narrowed behind the trigger guard to assist in bayonet thrust.
Manufacturer	- on one sample the manufacturer was marked on the barrel as: "MANUFACTURED BY WEBLEY & SCOTT LTD. BIRMINGHAM".
Action	- turn-bolt design.
Serial Number	- on one sample, a serial number was not marked on the receiver/frame.

FRT Report

Firearm Reference Number (FRN): 166423
Make: Gogor
Model: Remington Rolling Block Copy

Summary

Make:	Gogor
Model:	Remington Rolling Block Copy
Manufacturer:	Lascurain, Alejandro
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Single-Shot
Country of Manufacturer:	SPAIN
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
166423 - 1	43 SPANISH	1	558	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "Gogor" (Basque for "tough") may or may not be marked on the firearm.
- "Gogor" may be seen marked on firearms produced by both Alejandro Lascurain (ca.1930-1936) and Jose Maria Ibarlucea (after approximately 1955).

Model

- the model is not marked on the firearm; this is a descriptor of the firearm type.
- this is a Lascurain-built copy of the Remington rolling-block action, manufactured as a sporter-styled carbine prior to the Spanish Civil War.
- features include: blued finish; standard rolling-block layout and operation; round barrel open adjustable sights; sling swivels; wooden forearm and straight-grip stock; single-action trigger mechanism with manually-cocked external hammer; and a breech-block that simultaneously operates an extractor when opened.

Manufacturer

- "GOGOR" and/or "Alejandro Lascurain" is marked on the firearm.
- Alejandro Lascurain was a firearms and hardware manufacturer based in Eibar, Spain, from 1930 until the Spanish Civil War. Lascurain used the "Gogor" (Basque for "tough") trade name on many of his products, and the "Gogor trade name was revived after World War Two by Jose Maria Ibarlucea.

Action

- rolling-block single-shot.

Serial Number

- serial-numbered on the receiver/frame.

Calibre

- other calibres likely.

FRT Report

Firearm Reference Number (FRN): 149661
Make: Golcher, William
Model: Side By Side Percussion

Summary

Make:	Golcher, William
Model:	Side By Side Percussion
Manufacturer:	Golcher, William
Level:	Non-Commercial Customization
Type:	Shotgun
Action:	Multi-Barrel
Country of Manufacturer:	UNITED STATES OF AMERICA
Serial Numbering:	
Legal Classification:	Antique

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
149661 - 1	10 GA PERCUSSION	2	860	Antique AFR, Section 1, para. 5	Non-Commercial Customization	

Notes

Make

- "W. Golcher Patent Oct. 19, 1869" is usually marked on the tang in front of the thumb-piece.
- William Golcher (the son of James Golcher) was a designer and gunmaker from the mid-to-late 1800s, beginning in 1851, in Philadelphia. In 1855, he moved to St. Paul, Minnesota, where he patented and manufactured a number of different firearms. In 1878, he moved again, this time to San Francisco, California, where he became a partner with J. P. Clabrough & Bros, which became "Clabrough & Golcher" in 1879.

Model

- manufactured prior to 1878.
- the model is not marked on the firearm.
- this is a standard-pattern, percussion muzzle loader with external hammers.
- many of these shotguns were converted from muzzle-loaded percussion shotguns, while others were assembled from imported parts.
- features include: blued or browned finish; exposed manually-cocked hammers on sidelocks; double triggers; and walnut pistol-grip stock with splinter forearm.

Manufacturer

- "W. Golcher Patent Oct. 19, 1869" is usually marked on the tang in front of the thumb-piece.
- William Golcher (the son of James Golcher) was a designer and gunmaker from the mid-to-late 1800s, beginning in 1851, in Philadelphia. In 1855, he moved to St. Paul, Minnesota, where he patented and manufactured a number of different firearms. In 1878, he moved again, this time to San Francisco, California, where he became a partner with J. P. Clabrough & Bros, which became "Clabrough & Golcher" in 1879.

Action

- side by side configuration.

Notes

Make

- "Golden Eagle" was a trade name used by Nikko/Olin-Kodesha of Japan, under which several models of rifles and shotguns were sold in the U.S. and Canada.
- "GOLDEN EAGLE" is usually marked on the left side of the receiver/frame.
- "Golden Eagle" over "Firearms" over "Houston, Texas" is usually marked on the right side of the barrel.

Model

- some of the very first models of this rifle were produced with detachable magazines; thereafter, they were made with integral magazines with a floorplate.
- model designation is usually marked on the left side of the barrel as, "Model 7000".
- introduced circa mid-1970's; production ended when Golden Eagle ceased operations circa 1980's.
- turn bolt operated utilizing a rear locking bolt.
- features include: sliding tang safety; hardwood monte carlo stock with full pistol grip and a ventilated rubber buttplate.

Manufacturer

- "US Pat. 4005540", over "MADE IN JAPAN", over "BY NIKKO" is usually marked on the right side of the receiver ring.

Action

- turn-bolt operated.

Make: Goryunov
Model: Aswan

Summary

Make:	Goryunov
Model:	Aswan
Manufacturer:	Maadi
Level:	Manufacturer Specifications and Commercial Customization
Type:	Machine Gun
Action:	Full Automatic
Country of Manufacturer:	EGYPT
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
120601 - 1	7.62X54R RUSSIAN	N/A	722	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- the make is not marked on the firearm.

Model

- the model designation may not be marked on the firearm.
- this is a modernized ("M") version of the SG43 medium machinegun, in use by the Russian armed forces and copied around the world in former East Bloc countries.
- this machinegun differs from the parent SG43 (Goryunov) primarily in that the SGM has a longitudinally-fluted barrel, a cocking handle mounted on the right side of the receiver/frame, and most versions will have spring-loaded covers over the feed and ejection ports.
- features include (in addition to the above): spade grips; thumb trigger; lozenge-shaped ejection port on the left side of the receiver/frame; quick-change barrel assembly; and most versions of this machinegun will be seen on a "Sokolov"-type wheeled mount (for use by motorized infantry), although tripod mounts and solenoid-fired vehicle mountings are also seen.

Manufacturer

- the manufacturer (or factory code thereof) is marked on the firearm.

Action

- gas-operated.

Serial Number

- numbered on the receiver/frame; may contain non-Roman alphabet letters or Arabic script numbers.

Shots

- belt-fed firearm.

Notes

Make

- "Goryunov" is not marked on the firearm.
- "Goryunov" is derived from the last name of the designer, Petr Goryunov.
- "Petr Maximovich Goryunov" was born in Russia in 1902 and died in 1943.
- "Mikhail Mikhailovich Goryunov" was born in 1912 and was the younger brother of Petr Maximovich Goryunov.

Model

- "SG" or "SG-43" machine gun was designed by Petr Maximovich Goryunov.
- "SG" machine gun design was finished by Mikhail Mikhailovich Goryunov and Vasiliy Voronkov after the death of Petr Goryunov in 1943.
- "SG" was manufactured in six versions:
- "SG-43" has a smooth barrel with no fin and has a cocking handle lying horizontaly between the two spade grips, the sear is attached to the return spring guide, and the barrel lock is a simple wedge.
- "SG-43B" has a micometer barrel lock, and dust covers over the feed and ejection openings.
- "SGM" has the cocking handle on the right side of the receiver/frame, longitudinal barrel fins, and a seperated sear housing.
- "SMGB" was similar to the SMG but with a dust cover on the feed and ejection ports.
- "SMGT" is the tank version of the SMG with a solenoid on the back-plate of the receiver/frame.

Action

- gas operated.
- capable of full-automatic fire only.

Shots

- belt-fed.

19449 - 1	7.62X54R RUSSIAN	N/A	719	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "Goryunov" is not marked on the firearm.
- "Goryunov" is derived from the last name of the designer, Petr Goryunov.
- "Petr Maximovich Goryunov" was born in Russia in 1902 and died in 1943.
- "Mikhail Mikhailovich Goryunov" was born in 1912 and was the younger brother of Petr Maximovich Goryunov.

Model

- "SG" or "SG-43" machine gun was designed by Petr Maximovich Goryunov.
- "SG" machine gun design was finished by Mikhail Mikhailovich Goryunov and Vasiliy Voronkov after the death of Petr Goryunov in 1943.
- "SG" was manufactured in six versions:
- "SG-43" has a smooth barrel with no fin and has a cocking handle lying horizontaly between the two spade grips, the sear is attached to the return spring guide, and the barrel lock is a simple wedge.
- "SG-43B" has a micometer barrel lock, and dust covers over the feed and ejection openings.
- "SGM" has the cocking handle on the right side of the receiver/frame, longitudinal barrel fins, and a seperated sear housing.
- "SMGB" was similar to the SMG but with a dust cover on the feed and ejection ports.
- "SMGT" is the tank version of the SMG with a solenoid on the back-plate of the receiver/frame.

Action

- gas operated.
- capable of full-automatic fire only.

Shots

- belt-fed.

Firearm Reference Number (FRN): 120597
Make: Goryunov
Model: SGM

Summary

Make:	Goryunov
Model:	SGM
Manufacturer:	Russian State Arsenal, Tula
Level:	Manufacturer Specifications and Commercial Customization
Type:	Machine Gun
Action:	Full Automatic
Country of Manufacturer:	RUSSIA
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
120597 - 1	7.62X54R RUSSIAN	N/A	722	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- the make is not marked on the firearm.

Model

- the model designation may not be marked on the firearm.
- this is a modernized ("M") version of the SG43 medium machinegun, in use by the Russian armed forces and copied around the world in former East Bloc countries.
- this machinegun differs from the parent SG43 (Goryunov) primarily in that the SGM has a longitudinally-fluted barrel, a cocking handle mounted on the right side of the receiver/frame, and most versions will have spring-loaded covers over the feed and ejection ports.
- features include (in addition to the above): spade grips; thumb trigger; lozenge-shaped ejection port on the left side of the receiver/frame; quick-change barrel assembly; and most versions of this machinegun will be seen on a "Sokolov"-type wheeled mount (for use by motorized infantry), although tripod mounts and solenoid-fired vehicle mountings are also seen.

Manufacturer

- the manufacturer (or factory code thereof) is marked on the firearm.

Action

- gas-operated.

Serial Number

- numbered on the receiver/frame; may contain Cyrillic or non-Roman alphabet letters.

Shots

- belt-fed firearm.

Make:	Gouery Canat, J F
Model:	Noel Radial Revolver
Manufacturer:	Gouery Canat, J F
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Revolver
Country of Manufacturer:	FRANCE
Serial Numbering:	See Note
Legal Classification:	Antique

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
151067 - 2	30 PERCUSSION	8	91	Antique CC 84(1) "antique firearm" para. (a)	Non-Commercial Customization	
151067 - 1	30 PERCUSSION	10	101	Antique CC 84(1) "antique firearm" para. (a)	Non-Commercial Customization	

Notes

Make

- "J F GOUERY CANAT & CIE" or "J F GOUERY CANAT ET CIE" over "PARIS" in an oval is marked on the barrel.
- "SYSTEM A NOEL" over "BTE SCDC" in an oval may be marked on the opposite side of the barrel.
- Sebastien-Amedee Noel and & Francois Gueury obtained a French patent, number 66493, dated March 5, 1865. They had also obtained a British patent, number 659, dated March 9th, 1865 for their black powder "Rotovolver"/"Radial Revolver".

Model

- manufactured prior to 1873.
- model is not marked on the receiver/frame.
- the mechanism of this handgun is known as "Systeme Noel", after Sebastien-Amedee Noel and Francois Gueury who patented it in 1865.
- this is a very unusual, intricately-machined turret-style pistol made to use "pill" priming, an immediate precursor to the percussion cap. In this system, the sensitive priming compound was moulded into tiny spherical "pills", and those pills ignite when struck by a hammer, in the same manner as a percussion cap does.
- Noel's revolver used a vertically-oriented flat disk with multiple chambers (usually 10-12) bored along the outer radius of that disk, with a corresponding shallow flash-hole connected to each of those chambers arranged in a circle on the right side of the disk. A "pill" of priming compound would be placed in each of those flash-holes, allowing 10-12 shots before the turret had to be removed from the pistol to be reloaded.
- features include: fully engraved one piece, solid receiver/frame with integral barrel; top V notched rear sight; octagonal barrel with raised rib and fixed point front sight; side hammer; folding trigger without trigger guard; left side hinged 'door', loader for 'pill-style' rotary device/magazine.
- overall firearm length with 101mm (4") barrel is 226mm (8").

Manufacturer

- J. F. Goudry was a firearm manufacturer in Paris, France circa 1860.
- J. F. Gouery & Cie manufactured the 'Systeme Noel' handguns.
- J. F. Gouery Canat & Cie manufactured and distributed the 'Systeme Noel' Rotovolver/Radial revolver in Paris, France from 1870 to 1872.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- pill priming or pill-lock mechanism.
Serial Number	- serial number was observed marked on the bottom of the butt strap of the receiver/frame of the firearm. - serial number observed was repeated on various parts including the underside of the folding trigger and inside of the door of the rotary device. - serial number observed consisted of three numbers without a letter prefix or suffix.

Notes

Make

- "GRAND POWER" is marked on the right side of the slide.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "GRAND POWER K100" is marked on the slide. - features include: steel slide with front and back gripping grooves; ergonomically shaped plastic receiver/frame with steel inserts for the slide and trigger mechanism with a squared front trigger guard; exposed hammer; single/double action or double action only trigger mechanism; ambidextrous safety (steel or synthetic lever) on single/double action version, no manual safety on double action only version; ambidextrous magazine release; fixed or adjustable sights; blue/black matte or duo-tone (black receiver/frame with a matte chrome slide) finish. - older versions of this model had an accessory rail moulded into the sides of the dust cover and raised ribs on the front-strap. Later versions, with a receiver/frame designation of "K100 MK.06" moulded into the left side, have a Picatinny type rail moulded into the underside of the dustcover and a checkered front-strap. - Grand Power has also introduced two models with full automatic fire capability that also use the K100 MK.06 receiver/frame assembly. The first version, known as the model K102R has a selector that allows for Safe, Semi-Automatic and Two-Shot burst fire. The second version, known as the model K105 has a selector that allows for Safe, Semi-Automatic and unrestricted Full-Automatic fire. - overall length with a 108 mm (4 1/4") barrel is 202.5 mm (8"), and average weight is 740 grams (26 oz).
Manufacturer	- "Grand Power" is marked on the right side of the slide. - "Made in Slovakia" is marked on the left side of the slide. - "Grand Power" was established in 2002.
Action	- recoil operated.
Serial Number	- serial number is marked on a metal insert imbedded in the underside of the receiver/frame ahead of the trigger guard. - serial number of a referenced example consisted of the prefix "1K", a dash and five numbers or a letter prefix (B, C, D,) and six numbers.
Calibre	- calibre is marked on the right side of the firearm.
Shots	- detachable box magazine.
Importer	- the importer's name is not always marked on the firearm.
Canadian Law Comments	- samples have been noted with a serial number marked on the slide and barrel only. Firearms in Canada must have a serial number (or other authorized identifier) marked/placed on the receiver/frame.

Notes

Make

- "GRAND POWER" is marked on the right side of the slide.

Model

- introduced in 2012.
- only 100 manufactured.
- "10th Anniversary - 2002 - 2012 -" over "LIMITED EDITION" over the Grand Power logo and "Made in Slovakia" is marked on the left side of the slide.
- features include: fixed or adjustable sights; round rifled barrel; steel slide with front and rear gripping grooves; ergonomically shaped synthetic receiver/frame with steel inserts for the slide and trigger mechanism and with a squared front trigger guard and an integral equipment rail; exposed hammer; double/single action trigger mechanism; ambidextrous safety and magazine release; duo-tone sand/black or sand/nickel finish.
- overall length with a 108 mm (4 1/4") barrel is 202.5 mm (8"), and average weight is 740 grams (26 oz).

Manufacturer

- "Grand Power" is marked on the right side of the slide.
- "Made in Slovakia" is marked on the left side of the slide.
- "Grand Power" was established in 2002.

Action

- recoil operated.

Serial Number

- serial number is marked on a metal insert imbedded into the right side of the receiver/frame over the trigger guard.
- serial number may be repeated on the slide and barrel.
- serial number on some samples may only be marked on the slide and barrel.
- serial number of a referenced example consisted of one letter prefix and six numbers.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Shots - detachable box magazine.

125763 - 2	9MM LUGER	15	108	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "GRAND POWER" is marked on the slide.

Model

- the model designation was marked on both sides of the slide on the sample examined.
- features include: steel slide with front and back gripping grooves; ergonomically shaped polymer receiver/frame with steel inserts for the slide and trigger mechanism with a squared front trigger guard; exposed hammer; three-position, ambidextrous safety/selector lever allows for Safe, Fire and Two-Shot burst fire; ambidextrous magazine release; fixed or adjustable sights.
- this model uses a receiver/frame with a designation of "K100 MK.06". This designation, moulded into the left side, denotes a receiver/frame with a Picatinny type rail moulded into the underside of the dustcover and a checkered front-strap (early Grand Power receiver/frames used a different accessory rail and a ribbed front-strap).
- Grand Power also offers a second version, known as the model K105 which has a selector that allows for Safe, Semi-Automatic and unrestricted Full-Automatic fire.

Manufacturer

- "Grand Power" is marked on the both sides of the slide.
- "Made in Slovakia" is marked on the left side of the slide.
- "Grand Power" was established in 2002.

Action

- recoil operated.

Serial Number

- samples have been noted with a serial number that incorporates an alpha character prefix followed by sequential numbers. The serial numbers on the samples examined were marked on the slide and barrel assembly only.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre	- marked on the right side of the firearm.
Shots	- detachable box magazine.
Importer	- the importer's name is not always marked on the firearm.
Canadian Law Comments	- samples have been noted with a serial number marked on the slide and barrel only. Firearms in Canada must have a serial number (or other authorized identifier) marked/placed on the receiver/frame.

Notes

Make

- "GRAND POWER" is marked on the left side of the receiver/frame.

Model

- "SA vz.58 SPORTER" over "CAL. 7.62x39" is marked on the left side of the receiver/frame rear sight housing.
- "SA vz.58 SPORTER" has a resemblance to the Kalashnikov model AK47 assault rifle but is not a member of the Kalashnikov family of firearms.
- "SA" stands for "Samopal", "submachine gun" and "vz.(vzor) 58", "model 1958" in Czech.
- "SA vz.58 SPORTER" is a factory original, semi-automatic version of the "vz 58" family of firearms.
- "SA vz.58 SPORTER" is designed to accommodate a vast array of aftermarket parts.
- "SA vz.58 SPORTER" was also sold as a receiver/frame.
- features include: threaded muzzle; high front post sight bracket with hooded front sight and bayonet mounting point, notched tangent rear sight; gas tube mounted above the barrel; short stroke piston operating system with tilting breech block locking system; flat sided machined steel receiver/frame; safety lever mounted on the right side of the receiver/frame; magazine release lever located in front of the trigger guard; synthetic forearm with upper hand guard, pistol grip and buttstock that may be of skeleton, side folding type; blue/black or painted finish.
- overall length with a 410mm (16.14") barrel is 905mm (35.63"), average weight is 3.13kg (6.9lbs).

Manufacturer

- "GRAND POWER" is marked on the left side of the receiver/frame.
- "MADE IN SLOVAKIA" is marked on the left side of the receiver/frame.
- "Grand Power" was established in 2002.

Action

- gas operated.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number
- serial number is marked on the left side of the receiver/frame rear sight housing.
- serial number of referenced examples consisted of a two letter prefix (DT) and five numbers.

Calibre
- "CAL. 7.62x39" is marked on the left side of the receiver/frame rear sight housing.

Shots
- detachable magazine.

Notes

Make

- "GRAND POWER" over "MADE IN SLOVAKIA" is marked on the left side of the upper assembly.
- "GRAND POWER Ltd" over "Made in Slovakia" is marked on the right side of the receiver/frame.
- "GRAND POWER" was established in 2002.

Model

- "STRIBOG AC9A1" is marked on the right side of the upper assembly.
- "STRIBOG" is the Slavic god and spirit of the winds, sky and air.
- "AC" stands for the "Automatic Carbine" version of the Stribog series.
- "9" stands for the calibre.
- "A1" stands for the type of receiver/frame used, aluminium alloy.
- "STRIBOG AC9A1" is available as an "A2" variant having a polymer receiver/frame.
- features include: free floating barrel with threaded muzzle for flash hider/muzzle brake or three lug adapter; rectangular shaped upper assembly with a top, full length and bottom of the forend accessory rails; both side of the forend area having key hole shaped attachment points; lateral cocking handle that can be switch side; right side ejection port; ambidextrous magazine release; manual safety may also be ambidextrous; integral trigger guard; synthetic pistol grip; fixe or right side folding stock, may also have an adapter to install a AR-15/M4 type collapsible stock; black finish.
- overall length with a 254 mm (10") barrel with the stock folded is 484.5 mm (19"), with the stock unfolded 747 mm (29.4") and average weight is 2.8 kg (6.17 lbs).

Manufacturer

- "GRAND POWER" over "MADE IN SLOVAKIA" is marked on the left side of the upper assembly.
- "GRAND POWER Ltd" over "Made in Slovakia" is marked on the right side of the receiver/frame.
- "GRAND POWER" was established in 2002.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- blowback operated.
Serial Number	- serial number is marked on the right side of the receiver/frame. - serial number is repeated on the right side of the upper assembly, bolt and barrel.
Calibre	- calibre designation is marked on the right side of the upper assembly. - calibre designation is also marked on the bolt, visible through the ejection port.
Shots	- detachable box magazine.

Notes

Make

- "GRAND POWER" is marked on the left side of the firearm.
- "GRAND POWER" is marked on the right side of the receiver/frame.

Model

- Introduced in 2021.
- "STRIBOG SP9A3" is marked on the right side of the firearm.
- Features include: top mounted accessory rail; non-reciprocating charging handle; ambidextrous magazine release located on the receiver frame; ambidextrous safety.
- Overall length with a 203 mm (8 inches) barrel is 424 mm (16.69 inches), average weight is 2.06 kg (4.54 lbs).
- "SP" stands for the "Semi-Automatic Pistol" version of the Stribog series.

Manufacturer

- "GRAND POWER" is marked on the left side of the firearm.
- "GRAND POWER" is marked on the right side of the receiver/frame.

Action

- Delayed roller-locking system.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- The serial number is marked on the right side of the receiver/frame.
Calibre	- The calibre designation is marked on the right side of the firearm.
Shots	- Detachable box magazine.

Firearm Reference Number (FRN): 129679
Make: Gras
Model: 1866/74

Summary

Make:	Gras
Model:	1866/74
Manufacturer:	Manufacture d'Armes de St-Etienne (MAS)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Shotgun
Action:	Single-Shot
Country of Manufacturer:	FRANCE
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
129679 - 2	16 GA X 2 3/4"	1	702	Non-Restricted CC 2 "firearm"	Non-Commercial Customization	

Notes

Make

- "Gras" is not marked on the firearm.
- Captain Basile Gras was the designer of the Gras system.
- Captain Basile Gras presented a conversion to the French Army of a Chassepot Model 1866 'needle fire' combustible cartridge bolt action single shot rifle to fire metallic centre fire cartridges in 1873.
- Gras design was adopted by the French Military after evaluation trials of the Beaumont and Gras rifle in 1874.

Model

- "MLE 1866-74" is marked on the left side of the receiver/frame.
- this was originally a Gras Model 1866/74 Rifle which was re-manufactured to shotgun configuration by replacing the barrel, modifying the bolt head and removing excess wood.

Manufacturer

- "MANUFACTURE D'ARMES" over "St Etienne" is marked on the left side of the receiver/frame.

Action

- turn-bolt design.

Serial Number

- serial number was observed marked on the left side of the chamber of the barrel and repeated on the bolt.
- observed serial number consisted of a letter "S" prefix and five numbers.

Other Markings

- year of manufacture is marked on the side of the breech of the barrel.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Remarks

- This firearm is a single shot bolt action carbine introduced into the French military service in 1874. It is simple, reliable and sturdy and remained the standard artillery musketoon of the French until being superseded by the Berthier Carbine in 1892.
- In 1880 a modification to the action which permitted the escape of gas in the event of a ruptured cartridge case was introduced.
- Musketoons manufactured before 1880 were modified and those made after 1880 incorporated this modification.
- Modified and post 1880 musketoons were designated 1874/80 and so marked on the left side of the receiver.

Summary

Make:	Gras
Model:	1874 Rifle
Manufacturer:	Manufacture d'Armes de Chatellerault (MAC)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Single-Shot
Country of Manufacturer:	FRANCE
Serial Numbering:	See Note
Legal Classification:	Antique

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
405 - 1	11X59R FRENCH	1	820	Antique AFR, Section 1, para. 3	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "Gras" is not marked on the firearm.
- Captain Basile Gras was the designer of the Gras system.
- Captain Basile Gras presented a conversion to the French Army of a Chassepot Model 1866 'needle fire' combustible cartridge bolt action single shot rifle to fire metallic centre fire cartridges in 1873.
- Gras design was adopted by the French Military after evaluation trials of the Beaumont and Gras rifle in 1874.

Model

- the model designation "1874" appears on the left side of the receiver.

Manufacturer

- the manufacturer's name appears on the left side of the receiver.
- "Manufacture Nationale d'Armes de Chatellerault (MAC)" was established in Chatellerault, France in 1819.
- "Manufacture Nationale d'Armes de Chatellerault (MAC)" manufactured small arms for the French government including machine-guns, rifles and pistols between 1822 and 1968.

Serial Number

- appears on the side of the chamber of the barrel and has a script letter prefix.

Other Markings

- year of manufacture on side of breech of barrel.

Remarks

- This is a single shot bolt action rifle introduced into the French military service in 1874. It is simple, reliable and sturdy and remained the standard service weapon of France until being superseded by the Lebel Rifle in 1886. In 1880 a modification to the action which permitted the escape of gas in the event of a ruptured cartridge case was introduced. Rifles manufactured before 1880 were modified and those made after 1880 incorporated this modification. Modified and post 1880 rifles were designated 1874/80 and so marked on the left side of the receiver.

FRT Report

Firearm Reference Number (FRN): 409
Make: Gras
Model: 1874/80/14 Rifle

Summary

Make:	Gras
Model:	1874/80/14 Rifle
Manufacturer:	Manufacture d'Armes de Chatellerault (MAC)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Single-Shot
Country of Manufacturer:	FRANCE
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
409 - 1	8X50R LEBEL	1	798	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "Gras" is not marked on the firearm.
- Captain Basile Gras was the designer of the Gras system.
- Captain Basile Gras presented a conversion to the French Army of a Chassepot Model 1866 'needle fire' combustible cartridge bolt action single shot rifle to fire metallic centre fire cartridges in 1873.
- Gras design was adopted by the French Military after evaluation trials of the Beaumont and Gras rifle in 1874.

Model

- the model designation appears on the left side of the receiver as "1874/80/14".

Manufacturer

- the manufacturer's name appears on the left side of the receiver.
- "Manufacture Nationale d'Armes de Chatellerault (MAC)" was established in Chatellerault, France in 1819.
- "Manufacture Nationale d'Armes de Chatellerault (MAC)" manufactured small arms for the French government including machine-guns, rifles and pistols between 1822 and 1968.

Serial Number

- the serial number appears on the side of the chamber of the barrel (under the wooden handguard) and has a script letter prefix.

Remarks

- This is a conversion of existing Gras Rifles Model 1874/80 from the original 11X59R cartridge to 8X50R LEBEL carried out in 1914. Conversion involved fitting a new barrel chambered for the 8X50R LEBEL cartridge, sights of the 1886/93 Lebel rifle pattern and a handguard. This rifle was a war time expedient to arm line of communication and rear echelon troops.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make	- "Gras" is not marked on the firearm. - Captain Basile Gras was the designer of the Gras system. - Captain Basile Gras presented a conversion to the French Army of a Chassepot Model 1866 'needle fire' combustible cartridge bolt action single shot rifle to fire metallic centre fire cartridges in 1873. - Gras design was adopted by the French Military after evaluation trials of the Beaumont and Gras rifle in 1874.
Model	- model is not marked on the firearm. - this was originally a Gras Model 1866/74 (MLE 1866/74) or Model 1874 (MLE 1874) or Model 1874/80 (MLE 1874/M80) or a Model 1874/80/14 (MLE 1874/M80/M14) rifle which was re-manufactured to shotgun configuration by replacing the barrel, modifying the bolt head and removing excess wood. - the original markings from the Model 1866/74 or Model 1874 or Model 1874/80, may be present on the bolt and receiver/frame. The bolt may have been made up of surplus or recovered parts, hence the different numbers. - the bolt and barrel may also have Belgium proofs.
Type	- converted into a shotgun by modifing the 1874 Gras rifle.
Action	- turn bolt operated, single shot.
Serial Number	- may or may not be numbered. - some examples examined have been numbered on the bottom right side of the receiver breech ring just under the stock.
Calibre	- may be marked on the left side of the barrel.

Notes

Make

- "J. GRAVES" or "JOS. GRAVES" and "BANGOR" over "ME." is marked on the firearm.

Model

- manufactured prior to 1876.
- model designation is not marked on the firearm.
- this is a standard-pattern underhammer percussion "saw-handle"-style pistol, made along the same pattern as Adin Ruggles' early guns using Ruggles' 1828 patent for an underhammer lock, but notable for its SAA-style square-butt grip shape.
- features include: blued/browned finish; part-round/part-octagon barrel; fixed open sights; underhammer percussion lock; varying styles of triggers; and a "saw-handle"-profile of the square-butt grip, with an attachment screw running forward from the tang of the pistol into the frame, with brass or German silver liner plates to strengthen the throughpoints in the grip.

Manufacturer

- "J. GRAVES" or "JOS. GRAVES" and "BANGOR" over "ME." is marked on the firearm.
- Joseph Graves was located in Bangor, Maine, U.S.A. from 1846 to 1876.
- Joseph Graves specialized in manufacturing underhammer pistols and rifles.
- Joseph Graves and Malcom Long formed the partnership of "Graves & Long".
- "Graves & Long" was located in Bangor, Maine, U.S.A. from 1859 to 1861.

Action

- muzzle-loading.

Notes

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Make

- "GREAT WESTERN II" is marked on the barrel.
- "GREAT WESTERN II" is a trademark used on revolvers manufactured by Pietta and imported by EMF.
- "EMF", "EMF CO.", "EMF CO. CALIF. USA." or "EMF S.A. Cal." is marked on the firearm.
- "EMF" is the abbreviation for Early and Modern Firearms Company Incorporated.
- "EMF CO. Inc." is an importer and distributor.
- EMF was located in Studio City, California, U.S.A., before 1981.
- EMF moved to their new location in Santa Ana, California, U.S.A., circa 1982.
- EMF distributed the Dakota Single Action revolver series.
- EMF introduced the New Dakota Single Action Army revolver series in 1991.
- EMF's Dakota revolvers were mainly manufactured by Armi San Marco until 2000, and by Uberti starting in 2001.
- EMF introduced the Hartford 1873 Single Action Army series, circa 1991.
- EMF introduced the Great Western II 1873 Single Action series, circa 2003.

Model

- "GREAT WESTERN II" and/or "SINGLE ACTION ARMY" followed by the calibre may be marked on the top of the barrel.
- introduced in 2003.
- this is a reproduction of the Great Western Arms Company 1873 Single Action Army. The Great Western Arms Company 1873 Single Action Army revolver was manufactured between 1954 and 1962 and was a copy of the original Colt 1873 Single Action Army.
- features include: round barrel with a fixed half-moon blade front sight and a notch in the top strap for a rear sight; ejector rod mounted on the right bottom side of the barrel; solid top receiver/frame with fluted cylinder and right side loading gate; exposed spur hammer; single action trigger mechanism; squared handgrip available with walnut, stag horn or ivory grips; blue, nickel, stainless, satin nickel or case hardened finish.
- this firearm, when finished with a "birds head grip" is known as an "Express" model.

Manufacturer

- "FAP" in a diamond and "F.LLI PIETTA. is marked on the underside of the barrel.

Serial Number

- the serial number is marked on the bottom of the receiver/frame.

Calibre

- the calibre designation is marked on the barrel.

Other Markings

- copy of the original markings on the right side of the receiver/frame: "PAT. SEPT. 19, 1871" over "JULY. 2, 72/JAN. 19, 75".
- may be marked on the barrel: "MADE IN ITALY".

Notes

Make

- "GREAT WESTERN II" may be marked on the barrel.
- "GREAT WESTERN II" is a trademark used on revolvers manufactured by Pietta and imported by EMF.
- "EMF", "EMF CO.", "EMF CO. CALIF. USA." or "EMF S.A. Cal." is marked on the firearm.
- "EMF" is the abbreviation for Early and Modern Firearms Company Incorporated.
- "EMF CO. Inc." is an importer and distributor.
- EMF was located in Studio City, California, U.S.A., before 1981.
- EMF moved to their new location in Santa Ana, California, U.S.A., circa 1982.
- EMF distributed the Dakota Single Action revolver series.
- EMF introduced the New Dakota Single Action Army revolver series in 1991.
- EMF's Dakota revolvers were mainly manufactured by Armi San Marco until 2000, and by Uberti starting in 2001.
- EMF introduced the Hartford 1873 Single Action Army series, circa 1991.
- EMF introduced the Great Western II 1873 Single Action series, circa 2003.

Model

- "GREAT WESTERN II" may be marked on the barrel.
- "CENTENNIAL" and/or "1873 SA" may be marked on the barrel.
- these revolvers are long-barreled "Centennial" commemorative versions of the 1873 Colt Single Action Army revolver made with nickeled and engraved receiver/frames, blued or nickeled trigger guard and grip-frames and white or black synthetic grips.
- features include: fixed half-moon blade front sight and a notch in the top strap for a rear sight; round barrel with an ejector rod mounted on the right bottom side of the barrel; solid top receiver/frame with a removable fluted cylinder and right side loading gate; spur hammer; single action trigger mechanism; white or black synthetic "eagle" grips on a "plow handle" style square butt grip frame; blued or nickeled finish.

Manufacturer

- "FAP" in a diamond and/or "F.LLI PIETTA - MADE IN ITALY" is usually marked on the underside of the barrel.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- serial number is usually marked on the underside of the receiver/frame.
Calibre	- calibre designation is usually marked on the barrel.

- "EMF" is the abbreviation for Early and Modern Firearms Company Incorporated.
- "EMF CO. Inc." is an importer and distributor.
- EMF was located in Studio City, California, U.S.A., before 1981.
- EMF moved to their new location in Santa Ana, California, U.S.A., circa 1982.
- EMF distributed the Dakota Single Action revolver series.
- EMF introduced the New Dakota Single Action Army revolver series in 1991.
- EMF's Dakota revolvers were mainly manufactured by Armi San Marco until 2000, and by Uberti starting in 2001.
- EMF introduced the Hartford 1873 Single Action Army series, circa 1991.
- EMF introduced the Great Western II 1873 Single Action series, circa 2003.

Model

- "GREAT WESTERN II" and/or "SINGLE ACTION ARMY" followed by the calibre may be marked on the barrel.
- "PONY EXPRESS" may be marked on the barrel.
- introduced in 2009.
- this is a reproduction of a short barrelled 1873 Colt Single Action Army.
- features include: round barrel with a fixed blade front sight and a notch in the top strap for a rear sight; stainless steel finish; ejector rod mounted on the right bottom side of the barrel; solid top receiver/frame; fluted cylinder; right side loading gate; spurred hammer; single action trigger mechanism; one piece walnut grips with square butt or "bird's head" grip configuration.

Manufacturer

- "FAP" in a diamond and "F.LLI PIETTA. may be marked on the underside of the barrel.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- single-action revolver.
Serial Number	- the serial number is marked on the bottom of the receiver/frame. - serial number rationalization is unknown.

Notes

Make

- "GREAT WESTERN" or "GREAT WESTERN ARMS CO." is usually marked on the barrel or on the left side of the receiver/frame.

Model

- manufactured between 1953 and 1965.
- model designation is not marked on the firearm.
- this model resembles a Colt 1873 Single Action Army revolver.
- this model was also available in kit form with several options in finish and calibre.
- auxillary cylinders were available.
- when purchased as a "kit" for assembly, the serial number contains a "0" prefix.
- Great Western Arms Company renamed this model the "Frontier Six Shooter" circa 1958/1959.
- features include: blade front sight and an adjustable rear sight or a groove in the top strap of the receiver/frame for a rear sight; round barrel with a right side mounted ejector rod assembly; solid top receiver/frame with a removable fluted cylinder and right side loading gate; exposed spur hammer; single action trigger mechanism; ivory, plastic faux stag, pearl, stag horn or walnut grip plates; blued, chrome or nickel or silver or gold or gold and silver combination plated metal finish; blued, colour case-hardened, chrome or nickel or silver or gold or gold and silver combination plated receiver/frame.
- available with various grades of engraving.

Serial Number

- serial number is marked on underside of the receiver/frame, ahead of trigger guard.
- serial number may or may not have a two letter "GW" prefix.

Notes

Make

- "GREAT WESTERN" or "GREAT WESTERN ARMS CO." is usually marked on the barrel or on the left side of the receiver/frame.

Model

- manufactured from circa 1958/1959 to 1962.
- model designation does not appear on firearm.
- this model resembles a Colt 1873 Single Action Army revolver.
- this model was also available in kit form with several options in finish and calibre.
- auxillary cylinders were available.
- when purchased as a "kit" for assembly, the serial number contains a "0" prefix.
- features include: blade front sight and an adjustable rear sight or a groove in the top strap of the receiver/frame for a rear sight; round barrel with a right side mounted ejector rod assembly; solid top receiver/frame with a removable fluted cylinder and right side loading gate; exposed spur hammer; single action trigger mechanism; ivory, plasic faux stag, pearl, stag horn or walnut grip plates; blued, chrome or nickel or silver or gold or gold and silver combination plated metal finish; blued, color case hardened, chrome or nickel or silver or gold or gold and silver combination plated receiver/frame.
- available with various grades of engraving.

Serial Number

- serial number is marked on underside of the receiver/frame, ahead of trigger guard.
- when the serial number prefix is "0" the firearm was sold as a kit for assembly.
- serial number observed consisted of five numbers without a letter prefix or suffix.
- serial number observed consisted of a two letter "GW" prefix and five numbers.

Calibre

- calibre designation is usually marked on the left side of the barrel.

Level:	Converted Automatics
Type:	Machine Gun
Action:	Converted Automatic
Country of Manufacturer:	GREECE
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
119092 - 1	7.62MM NATO	N/A	531	Prohibited CC 84(1) "prohibited firearm" para. (c)	Converted Automatics	

Notes

Make

- make will not be found marked on the firearm.

Model

- essentially this firearm is a Greek assembled/produced (some local production of parts), Rheinmetall licenced copy of the MG3.
- rear left side of the receiver/frame is usually marked with the model, serial number, date of manufacture and the manufacturer's trademark.
- this firearm accepts both the US M-13 disintegrating link and the German DM1 & DM-6 disintegrating link belts.
- this firearm is a fully automatic, air-cooled, belt fed medium or general purpose machine gun utilizing a short recoil type of action which is gas-assisted by means of a recoil booster located within the flash hider; the bolt is of the roller locking type.
- features include;
- full automatic fire only.
- barrel is chrome plated.
- metal stamping type of construction,
- quick-change barrel system,
- easily removeable bi-pod.
- NOTE: this firearm will accept 2 different masses of bolt and different buffers from other models of the MG1. When the 550 g bolt is installed this machine gun will fire at a cyclic rate of 1000 to 1100 shots per minute. When the 950 g bolt is installed this machine gun will fire at a cyclic rate of 900 shots per minute.

Manufacturer

- "EBO" is marked on the firearm.
- "EBO" is the Greek acronym for the Elleniki Biomichanica Oplon of Anjio, Greece (Helenic Arms Industry).
- Hellenic Arms Industry (EBO) was founded in 1977.
- Hellenic Arms Industry (EBO) and Greek Powder & Cartridge Company (Pyrkal) merged and formed Hellenic Defence Systems (EAS) in 2004.
- Hellenic Defence Systems (EAS) is a state owned company.

Type

- air-cooled machine gun.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- no longer capable of full automatic fire.
Serial Number	- serial number usually located on the rear left side of the receiver/frame.
Barrel	- barrel length without the barrel extension is 531 mm. - barrel length with the barrel extension is 565 mm.
Calibre	- calibre designation is marked on the rear left side of the receiver/frame as: 7.62.
Shots	- this firearm accepts the US M-13 disintegrating link and the German DM1 & DM-6 disintegrating link belts. - belt fed machinegun. - also accepts a 100 cartridge, belt carrier type drum magazine.
Canadian Law Comments	- the magazine known as a "saddle-drum" type (doppeltrommel or satteltrommel"), which is not a reproduction and was originally designed or manufactured for use in the automatic firearms known as the MG13, MG15, MG17, MG34, T6-200 or T6-220, or any variant or modified version of it: is exempt from the conditions imposed in the "Regulations Prescribing Certain Firearms and other Weapons, Components and Parts of Weapons, Accessories, Cartridge Magazines, Ammunition and Projectiles as Prohibited or Restricted". - For further clarification or explanation see; the "Firearms Regulations" as published in Canada Gazette Part II, Vol 132, No 20 (30/9/98), Part IV, "PROHIBITED DEVICES", Paragraph (3) (a) of the "Former Cartridge Magazine Control Regulations".
Remarks	- in Yugoslavian service, manufactured at ZASTAVA, the MG42 was named "SARAC" or "M53". - the Italians manufactured this machine gun model (calibre 7.62 x 51 mm NATO) under the designation "MG42/59". - in 1957, the West Germans Government recommenced manufacture of this firearm in various calibres as the "MG1", "MG1A1", and later, the "MG3" & MG3e.

Firearm Reference Number (FRN): 119094
Make: Greek Machine Gun
Model: MG3

Summary

Make:	Greek Machine Gun
Model:	MG3
Manufacturer:	Hellenic Arms Industry (EBO)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Machine Gun
Action:	Full Automatic
Country of Manufacturer:	GREECE
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
119094 - 1	7.62MM NATO	N/A	531	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- make will not be found marked on the firearm.

Model

- essentially this firearm is a Greek assembled/produced (some local production of parts), Rheinmetall licenced copy of the MG3.
- rear left side of the receiver/frame is usually marked with the model, serial number, date of manufacture and the manufacturer's trademark.
- this firearm accepts both the US M-13 disintegrating link and the German DM1 & DM-6 disintegrating link belts.
- this firearm is a fully automatic, air-cooled, belt fed medium or general purpose machine gun utilizing a short recoil type of action which is gas-assisted by means of a recoil booster located within the flash hider; the bolt is of the roller locking type.
- features include;
- full automatic fire only.
- barrel is chrome plated.
- metal stamping type of construction,
- quick-change barrel system,
- easily removeable bi-pod.
- NOTE: this firearm will accept 2 different masses of bolt and different buffers from other models of the MG1. When the 550 g bolt is installed this machine gun will fire at a cyclic rate of 1000 to 1100 shots per minute. When the 950 g bolt is installed this machine gun will fire at a cyclic rate of 900 shots per minute.

Manufacturer

- "EBO" is marked on the firearm.
- "EBO" is the Greek acronym for the Elleniki Biomichanica Oplon of Anjio, Greece (Helenic Arms Industry).
- Hellenic Arms Industry (EBO) was founded in 1977.
- Hellenic Arms Industry (EBO) and Greek Powder & Cartridge Company (Pyrkal) merged and formed Hellenic Defence Systems (EAS) in 2004.
- Hellenic Defence Systems (EAS) is a state owned company.

Type

- air-cooled machine gun.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- short recoil operated, with a gas assist by means of a muzzle booster.
Serial Number	- serial number usually located on the rear left side of the receiver/frame.
Barrel	- barrel length without the barrel extension is 531 mm. - barrel length with the barrel extension is 565 mm.
Calibre	- calibre designation is marked on the rear left side of the receiver/frame as: 7.62.
Shots	- this firearm accepts the US M-13 disintegrating link and the German DM1 & DM-6 disintegrating link belts. - belt fed machinegun. - also accepts a 100 cartridge, belt carrier type drum magazine.
Canadian Law Comments	- the magazine known as a "saddle-drum" type (doppeltrommel or satteltrommel"), which is not a reproduction and was originally designed or manufactured for use in the automatic firearms known as the MG13, MG15, MG17, MG34, T6-200 or T6-220, or any variant or modified version of it: is exempt from the conditions imposed in the "Regulations Prescribing Certain Firearms and other Weapons, Components and Parts of Weapons, Accessories, Cartridge Magazines, Ammunition and Projectiles as Prohibited or Restricted". - For further clarification or explanation see; the "Firearms Regulations" as published in Canada Gazette Part II, Vol 132, No 20 (30/9/98), Part IV, "PROHIBITED DEVICES", Paragraph (3) (a) of the "Former Cartridge Magazine Control Regulations".
Remarks	- in Yugoslavian service, manufactured at ZASTAVA, the MG42 was named "SARAC" or "M53". - the Italians manufactured this machine gun model (calibre 7.62 x 51 mm NATO) under the designation "MG42/59". - in 1957, the West Germans Government recommenced manufacture of this firearm in various calibres as the "MG1", "MG1A1", and later, the "MG3" & MG3e.

Make: Greek Mortar
Model: C6 60MM

Summary

Make:	Greek Mortar
Model:	C6 60MM
Manufacturer:	Hellenic Arms Industry (EBO)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Mortar
Action:	Single-Shot
Country of Manufacturer:	GREECE
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
148819 - 1	60MM MORTAR	1	640	Prohibited PFR, Part 1, para. 95(z.059)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- the make is not marked on the mortar.

Model

- the model may or may not be marked on the mortar.
- Hirtenberger's "C" class of light mortars are designed to give infantry a lightweight, portable method of providing light fire support at ranges up to 1600 metres; these mortars may be seen in both drop-fired and trigger-fired models, with the trigger-fired models having a thumb trigger on a handle at the bottom of the launching tube. Hirtenberger also produces an M6 60mm mortar, intended for firing from an emplaced position, with a full bipod, baseplate, and sight..
- features include: matte black anodized/painted finish; a synthetic handgrip on the barrel; a carrying strap which doubles as a ranging apparatus (placing the forward edge of the foot on range lines marked on the strap holds the mortar tube at the proper angle to give the corresponding range); drop- or trigger-fired (trigger-fired versions have a thumb trigger on a grip extending from the bottom of the launch tube); and a bowl-shaped baseplate (which can be used in conjunction with a flat rectangular baseplate on soft ground).
- licenced versions of this mortar are also produced by Arsenal in Bulgaria and EBO in Greece.

Manufacturer

- the manufacturer or logo thereof is marked on the mortar.

Action

- drop or trigger fired single-shot.

Serial Number

- numbered on the barrel tube.

Notes

Make

- the make is not marked on the mortar.

Model

- the model may or may not be marked on the firearm.
- this is a medium mortar adopted and used by the Greek military for light artillery support at range sup to 5900 metres.
- this mortar is designed to be infantry-portable, so it can be moved and set up to provide more immediate artillery support for troops in the field, and to provide counter-battery fire when required.
- features usually include: smoothbore barrel; two extendable bracing legs with a moving cradle to allow elevation and traverse; a lensatic sight with range scales to allow for aiming once the mortar is laid into firing position; and a heavy baseplate to spread out the recoil of firing.

Manufacturer

- "EBO" is marked on the firearm.
- "EBO" is the Greek acronym for the Elleniki Biomichanica Oplon of Anjio, Greece (Helenic Arms Industry).
- Hellenic Arms Industry (EBO) was founded in 1977.
- Hellenic Arms Industry (EBO) and Greek Powder & Cartridge Company (Pyrkal) merged and formed Hellenic Defence Systems (EAS) in 2004.
- Hellenic Defence Systems (EAS) is a state owned company.

Action

- Stokes'-style "drop-to-fire" single-shot mortar.

Serial Number

- serial-numbered on the launch tube.

Notes

Make

- "C. GREEN" or "CHAS. GREEN" is usually marked on the firearm.
- Charles Green was a New York-based gunsmith based in Syracuse and Rochester during the late 1800s and early 1900s, known for his percussion target guns and side by side cartridge shotguns.

Model

- manufactured prior to 1897.
- model designation is not marked on the firearm.
- this is an under hammer percussion target pistol, often made in a "buggy rifle" configuration with a detachable shoulder-stock. These pistols characteristically have a very large-heavy-diameter octagonal barrel and finely-shaped orthopaedic pistol-grips.
- features include: blued or browned finish; heavy octagonal barrel; open adjustable or "tube" sights; under hammer percussion lock; varying styles of triggers; and a pistol-grip, usually with a detachable solid or frame shoulder-stock.

Manufacturer

- "C. GREEN" or "CHAS. GREEN" is usually marked on the firearm.
- Charles Green was a New York-based gunsmith based in Syracuse and Rochester during the late 1800s and early 1900s, known for his percussion target guns and side by side cartridge shotguns.

Action

- muzzle loaded percussion single-shot.

Barrel

- barrel lengths may vary.

Calibre

- calibres may vary.

56936 - 4	4 GA	1	1130	Antique AFR, Section 1, para. 5	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "W.W. Greener" may appear on the top of the barrel rib.

Model

- this is a very large single-shot hammerless boxlock shotgun, made for hunters for hunting waterfowl.
- features include:
- top lever opening and tip down barrel.
- walnut pistol-grip stock and forearm, and Damascus barrels.
- model name is not marked on the firearm.
- this model line was made circa 1873 to circa 1914.
- this model would also have utilized the Greener patented, Treble Wedge Fast action design.

Serial Number

- serial number marked on the water table.
- serial numbers are numeric only without prefix or suffix.
- NOTE: research indicates that a firearm in this model series with a serial number of 46484 or lower would have been made prior to 1898.

Canadian Law Comments

- some examples of this model, when manufactured prior to 1898, are considered "Antique" in Canada.

Notes

Make

- "W. W. Greener" or "Greener" or variation therof may be marked on the receiver/frame.
- "W.W. GREENER. MAKER" over "PATENT No 463628735" is marked on the left side of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- model designation found on the right side of the receiver/frame and on the Knox form of the barrel. - "EG"over "MARK III" is marked on the right side of the receiver/frame. - produced from 1922 to 1964. - features include: plain, two piece straight grip stock,long forend to protect barrel,sling swivels. metal butt plate with flap to contain cleaning kit; provisions to attach bayonet if required;
Manufacturer	- "W. W. Greener" or "Greener" or variation therof may be marked on the receiver/frame. - "W.W. GREENER. MAKER" over "PATENT No 463628735" is marked on the left side of the receiver/frame.
Action	- rear hinged, lever operated tipping block design. - Martini action is locked in the firing position by the tip of the operating lever holding the breech block face up and in line with the chamber.
Serial Number	- located on the right side of the receiver/frame. - observed specimen had a letter prefix and five digits
Barrel	- some variation in barrel lengths may occur.
Remarks	- This is a police version of the Greener G.P. shotgun. It features a full length military type forearm and sling swivels. In addition to regular 12 GA X 2 1/2" this gun was also chambered for a brass cased proprietary cartridge (14 GA GREENER SAFETY), guns chambered for the latter round cannot fire any other round (nor can the cartridge be fired in another type of firearm) because of the unique construction of the cartridge head and the gun's chamber.

Greener utilized a model designation system which involved assigning a letter for action type, a second letter (H) for the presence of automatic ejectors and a two or three digit numeral to designate the degree. This is a high quality double barrel top break hammerless shotgun. It was available on special order in ascending degrees of lavish embellishment. This gun has the distinctive thumb safety inletted into the left side of the stock directly above the triggers

Firearm Reference Number (FRN): 120403
Make: Greener, W W
Model: Howdah Pistol

Summary

Make:	Greener, W W
Model:	Howdah Pistol
Manufacturer:	Greener, W W
Level:	Manufacturer Specifications and Commercial Customization
Type:	Handgun
Action:	Multi-Barrel
Country of Manufacturer:	UNITED KINGDOM
Serial Numbering:	See Note
Legal Classification:	Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
120403 - 1	12 GA X 2 1/2"	2	235	Restricted CC 84(1) "restricted firearm" para. (a)	Non-Commercial Customization	
120403 - 2	13 GA	2	235	Antique AFR, Section 1, para. 7	Non-Commercial Customization	

Notes

Make

- "W.W. Greener" is marked on both lockplates and on the top of the rib between the barrels.

Model

- no model name is marked on this firearm.
- the model designation is derived from the fact that this type of large bore, side by side pattern pistol was used principally by dangerous game hunters for self protection against enraged tigers or other such game and was carried in the "howdah" or saddle on the back of an elephant during the hunt.
- this is a break action, side lock, side by side pattern pistol.
- features may include: damascus barrels; double triggers; double exposed hammers; underlever, top lever or side lever opening; fixed rear sight.
- British proofmarks are usually apparent on the barrels and/or receiver/frame.

Manufacturer

- "W.W. Greener" is marked on both lockplates and on the top of the rib between the barrels.

Action

- side by side pattern.

Serial Number

- known example had a four digit serial number marked on the action flats of the receiver/frame.

3653 - 2	16 GA X 2 3/4"	2	762	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	
3653 - 6	16 GA X 2 9/16"	2	762	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "W.W. GREENER", "W.W.G ENGLAND" or the Greener elephant trademark is usually marked on the lockplate and may be repeated on the breech face and water table.

Model

- features include; single bead front sight; concave tapered barrel rib; blued barrels and receiver/frame; splinter forearm usually checkered and often horn tipped; hammerless; safety located behind top lever; straight butt stock with checkered English grip; auto ejector and cocking indicators. Many examples are hand engraved.

Manufacturer

- barrel is usually marked "W.W. GREENER MAKER." followed by an address such as "68. HAYMARKET LONDON. WORKS ST MARY'S SQUARE. BIRMINGHAM"
- "W.W. GREENER", "W.W.G ENGLAND" or the Greener elephant trademark is usually marked on the lockplate and may be repeated on the breech face and water table.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- side by side configuration.
Serial Number	- serial numbers observed in the following locations: underside of barrels beneath forearm, water table, and on tang behind trigger guard.
Barrel	- other barrel lengths are possible as most of these guns were built to customer's specifications.
Calibre	- calibre is usually marked on the barrel flats. - other gauges are possible as most of these guns were built to customer's specifications.
Remarks	W.W. Greener utilized a model designation system which involved assigning a letter for action type, a second letter (H) for the presence of automatic ejectors and a two or three digit numeral to designate the degree of elaborateness of engraving. Contrary to this, apparently all "L" action guns have automatic ejectors hence no need to indicate the letter "H"

Firearm Reference Number (FRN): 3606
Make: Greener, W W
Model: Lee-Speed Military Pattern Commercial Carbine

Summary

Make:	Greener, W W
Model:	Lee-Speed Military Pattern Commercial Carbine
Manufacturer:	Birmingham Small Arms (BSA)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Bolt Action
Country of Manufacturer:	UNITED KINGDOM
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
3606 - 1	303 BRITISH	6	527	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "W.W. Greener" is marked on the left side of the butt socket or on the top of the barrel.

Model

- "LEE-SPEED", "PATENTS" and the manufactuer's abbreviation are usually marked on the right side of the butt socket.
- "LEE-SPEED" was manufactured by Birmingham Small Arms & Metal Company from 1892 to 1897 and by Birmingham Small Arms Company from 1897 to circa 1910.
- "Lee-Speed" was a commercial version of the British military Lee-Metford or Lee-Enfield (depending on the type of rifling) models MARK 1* or MARK 2 Carbine or Rifle.
- "Lee-Speed" Military Pattern commercial carbines and rifles are void of any British government ownership markings and usually have a better grade of wood and higher degree of finish than their government issue counterparts.
- "Lee-Speed" was also available in a sporting model with flat rib along the top of the barrel.
- "Lee-Speed Patents" were manufactured by the Birmingham Small Arms & Metal Company (BSA&M Co) circa 1894/1895 and several thousand were supplied to the British South Africa Company in Lee-Metford Military and Sporting Patterns.
- "Lee-Speed" should not to be confused with the later patterns of the Lee-Enfield No 1 (Short Magazine Lee-Enfield / Sht L.E.).

Manufacturer

- These carbines are believed to have been manufactured by B.S.A. on contract for W.W. Greener.

Serial Number

- serial number is marked on the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Calibre

- 303 BRITISH
- METFORD rifling system:
- Metford rifling, left hand, polygonal, 7 grooves, groove depth .004", land width .023", 1 turn in 10", introduced in 1888.
- ENFIELD rifling system:
- Enfield rifling, left hand, concentric, 5 grooves, groove depth .005", land width .0936", 1 turn in 10", introduced in 1895.
- Note: some barrels were manufactured with 2, 3, 4, 5 and 6 grooves.
- Note: some barrels were manufactured with 1 turn in 10.5" (Stevens/Savage).
- Note: some barrels were manufactured with right hand rifling (Long Branch).

Shots

- detachable box magazine.

Remarks

- This is a commercial version of the British military Lee Metford or Lee Enfield carbine (depending on the type of rifling). These commercial carbines are void of any British government ownership markings and usually have a better grade of wood and finish than government issue. Purchased by civilians and commonly awarded as prizes in shooting competitions.

Notes

Make

- "W.W. GREENER MAKER BIRMINGHAM" was observed marked on the left side of receiver/frame and the barrel.

Model

- model designation does not appear on these rifles.
- a reduced size Martini action, activated by swinging the under-lever down, which cocks the striker mechanism, tilts the front of the breech-block down to expose the rear of the chamber for unloading/loading, and causes the extractor to move rearward: the upward movement of the lever tilts the breechblock upwards, and returns the extractor to battery position.
- "COMMONWEALTH OF AUSTRALIA" was observed marked on the right side of the receiver/frame.

Manufacturer

- "W.W. GREENER MAKER BIRMINGHAM" was observed marked on the left side of receiver/frame and the barrel.

Action

- rear hinged, lever operated tipping block design.
- Martini action is locked in the firing position by the tip of the operating lever holding the breech block face up and in line with the chamber.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- normally marked on front of receiver, may be covered by forend. - may also be marked on top of barrel.
Calibre	- not marked with calibre designation.
Other Markings	- "COMMONWEALTH OF AUSTRALIA" was observed marked on the right side of the receiver/frame.
Remarks	- single shot full stocked military style rifle built on a miniature Martini action purchased by the Commonwealth of Australia as a universal arm for their cadet corps. Features military style sights and easily dismountable action. These rifles were also produced by the Birminghams Small Arms Company. Ordered by Australian Government in 1910 to 1930.

Notes

Make

- "W.W. GREENER BIRMINGHAM" is marked on the barrel.
- "W.W. GREENER" over "MAKER" over "BIRMINGHAM" is marked on the left side of the receiver/frame.

Model

- "MINIATURE" and "CLUB RIFLE" over "MARK II" is marked on the top of the barrel.
- this rifle is built on a small (miniature) Martini-type action utilizing the typical rear hinged tipping breech block.
- this type of rifle was designed and intended for use at indoor ranges at distances up to 100 yards.
- features include: round barrel with bead front sight and adjustable rear sight; Martini-type opening lever on the underside of the receiver/frame; take-down lever on the left side of the receiver/frame; blued metal work; walnut forearm and straight grip buttstock.
- British proof marks are apparent on the barrel and/or receiver/frame.

Action

- rear hinged, lever operated tipping block design.
- Martini action is locked in the firing position by the tip of the operating lever holding the breech block face up and in line with the chamber.

Serial Number

- observed serial number was marked on the rear left side of the barrel.
- known example had a six digit number without a letter prefix or suffix.

Calibre

- calibre designation may be marked on the rear of the barrel, eg. "AMMUNITION" over "297/230".

Notes

Make

- "W.W. Greener" and/or "W.W. Greener Maker Birmingham" and/or "W.W. Greener Maker Birmingham England" and/or "W.W. Greener London & Birmingham" and/or "W.W. Greener Ltd. Birmingham" is marked on the left side of the receiver/frame and/or on the top of the barrel.

Model

- the model designation is not marked on the firearm.
- this sporting rifle uses a Martini action, the action is locked by the tip of the operating lever propping the breechblock behind the chamber.

Manufacturer

- "W.W. Greener" manufactured shotguns and also modified military Martini rifles to a sporting rifle configuration.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Action	- rear hinged, lever operated tipping block design. - Martini action is locked in the firing position by the tip of the operating lever holding the breech block face up and in line with the chamber.
Serial Number	- the serial number is usually marked on the front underside or the bottom front edge of the receiver/frame.
Remarks	- this firearm is a sporting rifle built on a commercially manufactured Martini action. There is considerable variety in style and features regarding quality of wood, checkering, engraving, sights, barrel contour, safety lever and placement of the serial number.

3590 - 2	14 GA GREENER SAFETY	1	660	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Model

- model designation marked as "Police Gun" on the side of the receiver/frame.
- this is a police version of the Greener G.P. shotgun. It features a full length military type forearm and sling swivels. In addition to regular 12 GA X 2 1/2" this firearm was also chambered for a brass cased proprietary cartridge (14 GA GREENER SAFETY); those chambered for this round cannot fire any other round because of the unique construction of the catridge head and chamber.

Serial Number

- serial number is marked on the receiver/frame.

Barrel

- some variation in barrel lengths may occur.

Remarks

- This is a police version of the Greener G.P. shotgun. It features a full length military type forearm and sling swivels. In addition to regular 12 GA X 2 1/2" this gun was also chambered for a brass cased proprietary cartridge (14 GA GREENER SAFETY), guns chambered for this round cannot fire any other round because of the unique construction of the catridge head and the gun's chamber.

3685 - 1	500 NITRO EXPRESS	2	660	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Model	- The degree of elaborateness numeral may appear on the trigger guard.
Manufacturer	- "W.W. Greener" appears on the top of the barrel rib.
Serial Number	- Flats of the Receiver
Barrel	- Other barrel lengths are possible as these guns were built to customer's specifications.
Calibre	- In addition to the calibers listed, these guns were chambered for whatever calibre the customer requested.
Remarks	- W.W. Greener utilized a model designation system which involved assigning a prefix letter "R" for rifle followed by a letter indicating action type and a third letter (H) for the presence of automatic ejectors and a two digit number to designate the degree. This is a quality double barrel top break hammerless rifle utilizing the Anson and Deeley boxlock action. It was more economical to produce than the "Facile Princeps" boxlock action of the Greener "F" model series and hence more affordable for the average hunter. It was available in ascending degrees of embellishment. This firearms has the distinctive thumb safety inletted into the left side of the stock directly above the triggers.

Notes

Model

- "Rook Rifle" is not marked on the firearm.
- "Rook Rifle" model designation was used in the United Kingdom in refers to the intended purpose of a small, single shot, lightweight sporting rifle normally used for rabbit, crow, or vermin control.
- "Rook Rifle" was also known as a 'Garden Rifle', 'Rabbit Rifle', or 'Pest/Vermin Rifle'.
- "Rook Rifle" may be found with a number of different types of actions including but not limited to break open (hinged barrel design), falling block or Martini-type.
- this is a miniature Martini underlever operated hinged block action sporting rifle. - rifles of this type display a wide variation of optional features such as: engraving, deluxe wood, ribbed barrels and adjustable sights.

Manufacturer

- "W.W. Greener" is marked on the top of the barrel or side of the action.

Action

- rear hinged, lever operated tipping block design.
- Martini action is locked in the firing position by the tip of the operating lever holding the breech block face up and in line with the chamber.

Firearm Reference Number (FRN): 3628
Make: Greener, W W
Model: Short Magazine Lee Enfield Military Pattern Commercial Rifle

Summary

Make:	Greener, W W
Model:	Short Magazine Lee Enfield Military Pattern Commercial Rifle
Manufacturer:	Birmingham Small Arms (BSA)
Level:	Manufacturer Specifications and Commercial Customization
Type:	Rifle
Action:	Bolt Action
Country of Manufacturer:	UNITED KINGDOM
Serial Numbering:	See Note
Legal Classification:	Non-Restricted

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
3628 - 1	303 BRITISH	10	641	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make	- "W.W. Greener" is marked on the side of the butt socket.
Manufacturer	- These rifles are believed to have been manufactured by B.S.A. on contract for W.W. Greener.
Serial Number	- serial number is marked in the front of the receiver/frame.
Remarks	- This is a commercial version of the British government issue Short Magazine Lee Enfield rifle. These commercial rifles are void of any British government ownership markings and usually have a better grade of wood and finish than government issue. Many are used as target rifles and as such may have been highly modified. It is not to be confused with the earlier pattern Lee Enfield rifle which has a 767MM length barrel.

119127 - 1	357 MAG	1	197	Restricted CC 84(1) "restricted firearm" para. (a)	Non-Commercial Customization	

Notes

Make

- built on a W. W. Greener produced action and may retain the company name.

Model

- model designation is not marked on this pistol.
- this pistol was originally a Greener model Cadet Rifle, it was susequently modified/converted to "Handgun" configuration.
- this firearm uses a reduced size Martini action, activated by swinging the under-lever down, which cocks the striker mechanism, tilts the front of the breech-block down to expose the rear of the chamber for unloading/loading, and causes the extractor to move rearward: the upward movement of the lever tilts the breechblock upwards, and returns the extractor to battery position.

Serial Number

- marked on front of receiver/frame, may be covered by forend.

133300 - 2	12 GA X 2 1/2"	2	762	Non-Restricted CC 2 "firearm"	Manufacturer Specifications and Commercial Customization	

Notes

Make

- "W.W. GREENER" was observed marked on both lock plates.
- "W.W. GREENER" over "PATENT" was observed marked on the watertable and barrel flats.
- W.W. GREENER ST MARY'S. WORKS, BIRMINGHAM " and "WINNER AT THE LONDON GUN TRIALS 1875" was observed marked on the rib between the barrels.

Model

- manufactured from 1873 to 1914.
- "PATENT TREBLE" over "No 3084" over "WEDGE FAST" was observed marked on the rear of the top rib between the barrels.
- "TREBLE WEDGE FAST" does in fact refer to the type of action, however, it was also used by Greener as the model name for this product line.
- "No 3084" is the patent number granted to W. W. Greener on September 19th, 1873 for a Breech Action, drop-down barrel.
- "Treble Wedge Fast" is also known as the "TWF".
- features observed: side by side smoothbore barrels with a cross bolt rib extension; front hinged receiver/frame with a top tang mounted break open lever; side lock action featuring Greener's patented Treble Wedge Fast design; double exposed side hammers; double triggers; checkered wood forearm and straight grip buttstock; engraved receiver/frame, lock plates and barrels; blued finish.
- British proofmarks were observed marked on the receiver/frame and barrels.

Manufacturer

- "W.W. GREENER" was observed marked on both lock plates.
- "W.W. GREENER" over "PATENT" was observed marked on the watertable and barrel flats.
- W.W. GREENER ST MARY'S. WORKS, BIRMINGHAM " and "WINNER AT THE LONDON GUN TRIALS 1875" was observed marked on the rib between the barrels.

Action

- side by side barrel configuration; hinged barrel design.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- serial number was observed marked on the watertable of the receiver/frame and repeated on the barrel assembly and the rear tang of the trigger guard. - observed serial numbers consisted of five numbers without a letter prefix or suffix. - NOTE: research indicates that this model series with a serial number of 46484 or lower would have been made prior to 1898.
Canadian Law Comments	- some examples of this model, when manufactured prior to 1898, are considered "Antique" in Canada.
Other Markings	- "NOT FOR BALL." was observed marked on the underside of the barrel assembly.

- "Griffin" & "Howe" was a subsidiary of "Abercrombie & Finch" from 1930 to 1976.
- "Griffin" & Howe" were not producing firearms during the period of WWII, but were in the business of providing firearm accessories, such as: G&H side mounts (for scopes, most commonly found on M1 Garand rifles), triggers and trigger guards, about 50 different firearm parts required by the American Aircraft Industry.
- "Griffin & Howe", as of 1963 they were listed as being at 114 East 13th Street, New York, NY, USA for "Custom Sporting Rifles", which has since closed.
- "Griffin & Howe" currently have stores in Andover, New Jersey, USA; Greenwich, Connecticut, USA; and in Bernardsville, New Jersey, USA.
- "Griffin & Howe" is still a custom rifle manufacturer and still offer custom gunsmithing.

Model

- "SUPERBRITTE" is marked on the receiver/frame of the shotgun, usually the water table.
- This is a highly-unusual over-under sidelever shotgun that operates in a manner similar to most side by side shotguns, but arranged so that the gun breaks open to the right (like a door hinge) when the right-side opening lever is depressed.
- Features include: hinged receiver/frame with a right-side action release lever with a checkered thumb-pad; safety located on the upper tang of the receiver/frame.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- "BRITTE S.A." is usually marked on the firearm. - "Britte, Théophile", listed gun maker in 1874. - "Britte, Lambert", joined his brother in gun making business in 1896-97. - Between 1902-1914, acquired eight (8) patents related to firearms, most notable the "fusil "hammerless" as détentes alternative" or "un fusil à brisure latérale", known as the SUPERBRITTE. - "Establissements Britte SA", in 1924, registered their location at "Rue de Cheratte, 252 à Vivegnis", plus an added workshop in Herstal in 1949. - In 1923, a partnership with "Jules Bury" and "Masquelier" was formed and named "Establissement Britte Atelier de Mécanique de Précision Armes en Blanc" (basically, a "Precision Mechanical Workshop for Firearms in-the-White.") Names which may appear on firearms along with the name BRITTE or SUPERBRITTE.
Action	- Hinged barrel design. - Break open action. - Over and under barrel configuration. - Breaks open to the right (like a door hinge) when the right-side opening lever is depressed.
Serial Number	- The serial number is marked on the receiver/frame of the firearm.
Other Markings	- Belgian proof marks may be marked on the firearm.

Notes

Make

- "Griffin & Howe" may be marked on the firearm.
- The maker's logo, a "Ram's Head" with curling horns, may be marked on the firearm.
- Griffin & Howe is a custom gun-making firm that was founded in New York, NY in 1923; they specialize in re-working customer-supplied rifles to the customer's tastes.

Model

- The model designation is not marked on the receiver/frame.
- May also be known as "Sharps 1885".
- Features may include: case hardened or stainless steel receiver/frame and butt plate; tapered full octagon barrel; exposed hammer; the front sight may be a globe sight or a fixed sight; the rear sight may be an adjustable sight located on the barrel or a vernier adjustable sight located on the butt stock; straight or pistol grip walnut stock and forend.
- Added features may include: custom barrel works (such as changed chambers/altered chokes, changing sights front and rear for custom options); main receiver/frame action (colours, altered action, ejector work, added parts or springs); altered or changed triggers and trigger guards; wood stocks in various configurations, including customized engraving; maker name inlaid in gold; coin finished frame; game scene engravings with gold accents; upgraded quality of wood.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Manufacturer	- "Griffin & Howe, New York" may be stamped on barrel. - Griffin & Howe was established in 1923, founded by Seymour Griffin, cabinet maker and James Howe, machinist. - Griffin & Howe primarily made custom stock and accessories for existing models of Mauser, Springfield, Winchester and various other "foreign" model actions, like Belgium Browning "B25" or "B125", Zoli "Britte", Gamba "Clarmont", Lebeau-Courally "Continental Sidelock", Perazzi "MX3CL", Verney Carron... etc... - Griffin & Howe was a subsidiary of Abercrombie & Finch from 1930 to 1976. - Griffin & Howe were not producing firearms during the period of WWII, but were in the business of providing firearm accessories, such as: G&H side mounts (for scopes, most commonly found on M1 Garand rifles), triggers and trigger guards, about 50 different firearm parts required by the American Aircraft Industry. - Griffin & Howe, as of 1963 they were listed as being at 114 East 13th Street, New York, NY, USA for "Custom Sporting Rifles", which has since closed. - Griffin & Howe currently have stores in Andover, New Jersey, USA; Greenwich, Connecticut, USA; and in Bernardsville, New Jersey, USA. - Griffin & Howe is still a custom rifle manufacturer and still offer custom gunsmithing.
Action	- Falling block action.
Serial Number	- The serial number is usually marked on the receiver/frame of the firearm. - The serial number rationalization is unknown.
Barrel	- Other barrel lengths available, but not specified; made to customers' orders.
Calibre	- Other calibres available; chambered in whichever calibre the customer wants.

100015 - 1	36 PERCUSSION	6	191	Antique CC 84(1) "antique firearm" para. (a)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- The make is not marked on the firearm.
- Samuel Griswold manufactured arms for the Confederate States of America from 1862 until the destruction of his factory in Griswoldville, Georgia in November 1864.
- Early collectors often referred to the make as "Griswold & Grier", after an uncle named E. C. Grier was dispatched to take over operations. There are no official records that recognize the "Griswold & Grier" name; the Confederate Ordnance Officers only acknowledge the name "Griswold & Gunnison".

Model

- The model designation is not marked on the firearm.
- This is a Confederate States government revolver, patterned after the Colt Third Model Dragoon and Colt Model 1851 Navy revolvers.
- Manufactured from 1862 to 1864.
- Features include: fixed sights; round to octagonal Dragoon type iron barrel with rammer/loading lever; brass open top receiver/frame with six stop slots iron cylinder; exposed spur hammer; single action trigger mechanism; brass trigger guard and back strap; plain walnut grips; blued finish.

Manufacturer

- The manufacturer's name will is not marked on the firearm.
- Samuel Griswold manufactured arms for the Confederate States of America from 1862 until the destruction of his factory in Griswoldville, Georgia in November 1864.

Action

- Single-action black powder percussion revolver.

Serial Number

- The serial numbering commenced at number 1 and continued to approximately number 3,700.
- The serial number is located on the right side of the brass receiver/frame and the cylinder.
- The sub serial number, usually the last or the two last digits, were repeated on other metal parts.

Other Markings

- The stamping of "C.S." (Confederate States [of America]) on the pistol constituted government acceptance and a property mark.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Notes

Make	- "GRULLA ARMAS" or "GRULLA - ARMAS" may be marked on the firearm.
Model	- the model designation may not be marked on the firearm. - features include: blued barrels; concave rib; sidelock design receiver/frame; ejectors; top tang mounted opening lever and safety button; double triggers; highly engraved receiver/frame and barrel fences; receiver/frame is either colour case hardened or old silver finished; checkered walnut English style straight stock with splinter forearm.
Manufacturer	- manufacturer's identifier/logo is usually marked on the water table and underside of the barrel flats. - based on a 1995 Spanish government requirement, the water table will also bear a "31-03" marking; the "31" is a gunmaker's code that denotes manufactured by Grulla Armas and the "03" denotes the code for a shotgun.
Action	- side by side barrel configuration.
Serial Number	- serial number may be marked on the water table as sequential numbers. The serial number may be repeated on the underside of the barrel assembly. - the manufacturer's code of "U.A.", is not actually part of the serial number. "UA" is marked in close proximity to the serial number. - serial number range pre-1995 was from approximately 0001 to 32,508. - in 1995, the Spanish government instituted a new system for firearm's serial numbering. This system incorporated the code number of the gunmaker/manufacturer, weapon code, serial number sequence, and year of manufacturer. - an example of a serial number is as follows: "31 - 03 - #0# - 95". - serial number break down, the first two numbers (31) are the code numbers for the manufacturer, the next two numbers (03) are the code numbers for shotgun, the next numbers are the serial number sequence and the last two numbers (95) are the year of manufacture.
Calibre	- the calibre designation is usually marked on the barrel assembly.

Model	- the model designation may not be marked on the firearm. - features include: blued barrels; concave rib; sidelock design receiver/frame; ejectors; top tang mounted opening lever and safety button; double triggers; engraved receiver/frame and barrel fences; receiver/frame is either colour case hardened or old silver finished; checkered walnut English style straight stock with splinter forearm.
Manufacturer	- manufacturer's identifier/logo is usually marked on the water table and underside of the barrel flats. Based on a 1995 Spanish government requirement, the water table will also bear a "31-03" marking, the "31" is a gunmakers code that denotes manufacture by Grulla Armas and the "03" denotes the code for a shotgun.
Action	- side by side barrel configuration.
Serial Number	- serial number may be marked on the water table as sequential numbers. The serial number may be repeated on the underside of the barrel assembly. - the manufacturer's code of "U.A.", is not actually part of the serial number. "UA" is marked in close proximity to the serial number. - serial number range pre-1995 was from approximately 0001 to 32,508. - in 1995, the Spanish government instituted a new system for firearm's serial numbering. This system incorporated the code number of the gunmaker/manufactuer, weapon code, serial number sequence, and year of manufacturer. - an example of a serial number is as follows: "31 - 03 - #0# - 95". - serial number break down, the first two numbers (31) are the code numbers for the manufacture, the next two numbers (03) are the code numbers for shotgun, the next Numbers are the serial number sequence and the last two numbers (95) are the year of manufacture.
Calibre	- the calibre designation is usually marked on the barrel assembly.

FRT Report

Firearm Reference Number (FRN): 16060
Make: Gryazev Shipunov
Model: 2A42

Summary

Make:	Gryazev Shipunov
Model:	2A42
Manufacturer:	Arsenal
Level:	Manufacturer Specifications and Commercial Customization
Type:	Cannon
Action:	Full Automatic
Country of Manufacturer:	BULGARIA
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
16060 - 1	30X165	N/A	2400	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make	- the make is not marked on the firearm. - this make is a combination of the two primary designers of a series of post-World War Two aircraft cannon, Vasily Gryazev and Arkadiy Shipunov.
Model	- the model may or may not be marked on the cannon. - this is a larger-calibre adaptation of the 2A14 cannon by Gryazev and Shipunov, in order to provide a medium-calibre cannon capable of defeating armoured vehicles at ranges up to 1500 metres, and soft-skinned targets at ranges up to 4000 metres; this cannon may be seen mounted on a variety of armoured vehicles and on helicopter gunships. - features include: parkerized finish; may include various forms of muzzle brake; a rectangular receiver; and this cannon is cocked by using electrically-fired blank cartridges loaded into a separate chamber below the receiver.
Manufacturer	- the manufacturer or logo thereof is marked on the cannon.
Action	- gas operated.
Serial Number	- serial numbered on the receiver/frame.
Shots	- dual belt feed.

FRT Report

Firearm Reference Number (FRN): 143956
Make: Gryazev Shipunov
Model: GSh-23

Summary

Make:	Gryazev Shipunov
Model:	GSh-23
Manufacturer:	Degtyarev
Level:	Manufacturer Specifications and Commercial Customization
Type:	Cannon
Action:	Full Automatic
Country of Manufacturer:	RUSSIA
Serial Numbering:	See Note
Legal Classification:	Prohibited

Calibre, Shots and Barrel Length

FRN	Calibre	Shots	Barrel (mm)	Legal Classification Legal Authority	Level	Barrel Type Code
143956 - 1	23X115	N/A	1000	Prohibited CC 84(1) "prohibited firearm" para. (c)	Manufacturer Specifications and Commercial Customization	

Notes

Make

- the make is not marked on the firearm.
- this make is a combination of the two primary designers of a series of post-World War Two aircraft cannon, Vasily Gryazev and Arkadiy Shipunov.

Model

- the model is marked on the firearm.
- this is an unusual aircraft cannon that was designed in the early 1950s, and has since become one of the most often-used air-to-air and air-to-ground aircraft cannon in history; it is used or copied by almost the entire (former) Eastern Bloc and China.
- this cannon resurrects an idea from the First World War (seen in the Gast machine gun), where a paired set of guns use the energy of each other to drive their own firing cycles; but, where the Gast used a purely mechanical/recoil system, the GSh-23 uses gas operation, where gas is tapped from the barrel of one cannon to drive a piston operating the other, and vice-versa. In order to cock this cannon, or to reload it during flight if a misfire occurs, a three-chambered block at the forward end of the gas pistons is loaded with three blank propelling cartridges that can be fired one at a time in order to provide enough impulse to cycle the action.
- features include: parkerized/phosphated finish; dual barrels in a single receiver; a yoke on top of the receiver that converts the back-and-forth motion of the bolts into side-to-side motion to draw a linked belt of ammunition into the receiver; and electrical firing controls. These cannon have been seen mounted on a large variety of airplanes and helicopters (MiG fighters, Tupolev bombers, and Mi-24 helicopter gunships), and the versions usually seen on helicopter gunships are fitted with large muzzle brakes to reduce recoil (these versions are called the "GSh-23L").
- the overall length of the GSh-23 is 1387mm, and that of the GSh-L is 1537mm.

Manufacturer

- the manufacturer or logo thereof is marked on the firearm.
- the V.A. Degtyarev Factory (Russian: "Zavod imeni Degtyareva", or "ZiD") is the current incarnation of a manufacturer that was originally set up in Kovrov, Russia, by Danish investors to produce Madsen machine guns for the Russian armed forces during World War One. After the factory was nationalized during the Russian Revolution, it became known as "Factory 2", and then the "Kirkizh Factory" (after a Communist leader who had died in 1927). During the 1950s, the factory was part of a conglomerate in the closed city of Kovrov known as the "Kovrov Mechanichevsky Zavod"/"Kovrov Mechanical Factory", but in 1993, the small arms and cannon component of that factory was reorganized into its own stand-alone manufacturer again, as the "Factory in the name of V.A. Degtyarev".

Action

- gas operated, dual barrels.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number	- numbered on the receiver/frame, usually with a prefix of two Cyrillic letters.
Shots	- belt fed firearm.

48252 - 1	7.65MM	8	100	Prohibited CC 84(1) "prohibited firearm" para. (a)	Non-Commercial Customization	

Notes

Make

- "GSM", "MAUSER OBERAUDORF, GERMANY" and "SLP 1 Cal. 7.65 mm (.32 Browning) was observed marked on the left side of the slide.
- NOTE: one reference has the "GSM" manufactured by G. S. Mauser of Oberaudorf, Germany.
- "G. S. Mauser" is not to be confused with the original Gebrube Mauser & Company established by Gebruder Mauser in Oberndorf am Neckar, Germany in 1872 and later renamed Waffenfabrik Mauser AG in 1884.
- NOTE: one reference has the "GSM" manufactured by a Hungarian company and sold by a distributor in Germany in the 1960s.

Model

- "GSM", "MAUSER OBERAUDORF GERMANY" and "SLP 1 CaL. 7.65mm (.32 Browning)" was observed marked on the left side of the slide.
- "GSM" is not to be confuse with Mauser Oberndorf am Neckar, Germany.
- "SPL 1" in 7.65 mm resembles a Walther model PPK pistol.
- "SPLT" in 9MM Browning Short resembles a Walther model PP pistol.
- features include: unusual loaded cartridge indicator on the top left of the slide, about 33mm in front of windage adjustable rear sight; single/double action trigger mechanism; steel receiver/frame, slide, barrel, and internal parts.

Action

- blowback operation.

Serial Number

- serial number was observed marked on the left side of the receiver/frame, behind the trigger.
- observed serial number consisted of a letter "P" prefix and four numbers.

Calibre

- calibre is marked on the left side of the slide.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Shots - detachable box magazine.

Other Markings
- proof marks on the left side of the frame behind the trigger: an encircled capital letter "M", and a partial pair of "wings" forming a circle, on a base.
- underside of the foreward slide, the numbers "1981".

Notes

Make

- "GUEDES" is not marked on the firearm.
- the 1886 Rifle was developed for the Portuguese Army by the Lieutenant Luis Guedes Dias circa 1882 to 1884.

Model

- "M 1885" was observed marked on the left side of the receiver/frame.
- manufactured in 1885 and 1886.
- "1885" is a single shot, under lever, dropping block rifle designed in Portugal, adopted as a military arm by the Portugese government and manufactured in Austria.
- "1885" rifle was obsolete before it was manufactured and the Portugese government took delivery of only a small portion of the contracted quantity.
