Notes

Make

- "Haenel - Original - Aydt" is marked on the receiver/frame and the side of the dropping breechblock.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Model	- "Haenel - Original - Aydt" is marked on the receiver/frame and the side of the dropping breechblock. - "Haenel - Original - Aydt" markings were used from 1890 to 1904, - Haenel also supplied other manufacturers with receivers/frame and parts so they could build their own licenced versions of the Aydt rifle. - these re-licenced versions are normally marked "Original Syst. Aydt". - this is a single-shot target rifle produced by C.G. Haenel under a patent issued to Carl Wilhelm Aydt in 1884; Haenel had agreed to purchase the production rights to Aydt's design after it grew very popular among German target shooters, and had the sole rights to produce this action up until 1904. After Aydt's German patent expired in 1904, many other German manufacturers also produced single-shot rifles and pistols using the Aydt action; firearms manufactured by other manufacturers after Aydt's patent expired are customarily marked "Syst. Aydt" on the breechblock. - this rifle is a single-shot with a hammer concealed inside the breechblock, and has an extractor on the left side of the chamber. - features include: a wide range of possible finishes and engraving styles, but usually blued with engraved receiver walls; octagonal barrel (sometimes fluted); a two-piece walnut forearm and butt (with varying degrees of carving, checkering, and inlay); micrometer-adjustable peep sights (but may also be seen with adjustable open backup sights); a flat-sided receiver with hexagonal top and two curved, overlapping oval-headed pins on the left side (these form the hinge pins for the extractor and the breechblock); double set triggers; an ornate filigree frame grip that swings down to open the action; and a butt with a cheekrest and hooked buttplate.
Manufacturer	- "Haenel - Original - Aydt" is marked on the receiver/frame and the side of the dropping breechblock.
Action	- lever operated, drop/falling block design.
Serial Number	- serial number is usually marked on the receiver/frame, and an alternate number may be marked on the breech block. - serial number observed consisted of five numbers without a letter prefix or suffix.
Calibre	- "8.15X46 Norm" marked on the left side of the barrel.
Canadian Law Comments	- some examples of this model, when manufactured prior to 1898, are considered "Antique" in Canada.

Notes

Make

- the make is marked on the firearm as "JOHN H. HALL" over "PATENT".
- John Harris Hall was an American inventor and gunsmith from Yarmouth, Maine, who patented an idea for making a quick-loading flintlock firearm using a hinged breech-piece that pivots up out of line with the bore. This idea was adopted by the US government and put into production in 1819 at the Harper's Ferry Arsenal in Virginia, where Hall was installed as a superintendent.

Model

- manufactured prior to 1850.
- the model is not marked on the firearm; this is a descriptor of the firearm type.
- this is one of a number of pistols manufactured by or for John Harris Hall, based on his 1811 patent for a breech-loading flintlock small arm; Hall's idea was used in handguns, sporting/hunting rifles, and in the 1819 military rifle adopted by the US Army.
- Hall's patent centred on the use of a relatively short breech section of the barrel (having an integral top-mounted cock, frizzen, and flash-pan), that can be tipped up out of line with the barrel by pressing a trigger-like hook below the forearm; this allowed a user to quickly load that short breech section with a pre-loaded paper cartridge, then press the breech back down into line for firing (rather than push the powder, wad and ball down from the muzzle). This greatly speeded up the rate of fire, but the gap between the breech and the barrel also allowed a significant loss of velocity.
- features include: bronze (early) or iron (later) construction; full-length stock; under-forearm breech latch; straps down the sides of the pistol, joining the barrel to the rear of the breech; and a tilting breech section in-line with the barrel with a T-shaped forward piece and an integral cock, frizzen, and flash-pan.

Manufacturer

- the manufacturer is marked on the firearm as "JOHN H. HALL" over "PATENT".

136554 - 1	47 FLINTLOCK	1	65	Antique CC 84(1) "antique firearm" para. (a)	Non-Commercial Customization	

Notes

Make

- "HAMPTON" or "HAMPTON LONDON" is usually marked on the lockplate or barrel.

Model

- manufactured prior to 1842.
- model designation is not marked on the firearm.
- model designation is derived from the method by which this pistol is loaded; loading was accomplished by unscrewing the barrel.
- this is a single shot pistol with a removable barrel and an exposed hammer centrally located on the receiver/frame behind the chamber.
- this handgun is intended to be loaded from the breech end of the barrel and as such was originally suppied with a wrench to unscrew the barrel from the receiver/frame in order that a lead ball and loose powder could be inserted into the chamber end of the barrel and then the barrel screwed back onto the receiver/frame.
- features include: blued, octagonal, screw on barrel; centrally located cock with flint ignition; folding trigger; engraved, etched brass receiver/frame; checkered, wooden grip panels; cast brass butt cap.

Manufacturer

- "HAMPTON" or "HAMPTON LONDON" is usually marked on the lockplate or barrel.
- Charles Hampton was a manufacturer located at 7 Ellen Street, Birmingham, England circa 1841.
- Thomas Hampton was a manufacturer located in Birmingham and London, England from 1807 to 1827.
- Thomas Hampton was a manufacturer of arms to His Majesty's Honorable Board of Ordnance and also fowling pieces, guns and pistols for exportation.
- Thomas Hampton's firearms are usually marked "LONDON".

Action

- the barrel unscrews in front of the chamber, so it can be loaded with a ball that fits the barrel more tightly than is possible with a muzzle loader.
- the turnoff barrel may be rifled.

Notes

Make

- " H.&R. ARMS CO." over "WORCESTER, MASS. U.S.A." or "HARRINGTON & RICHARDSON ARMS Co." over "WORCESTER MASS. U.S.A." is usually marked on the barrel.

Model

- Harrington & Richardson's Top Break, Double Action Revolvers were manufactured from 1885 to 1941.
- Harrington & Richardson's Top Break, Double Action Revolvers were available in numerous variations with an Automatic Ejecting or Manual Ejecting system.
- "HAMMERLESS" may be marked on the left side of the barrel.
- Harrington & Richardson's Top Break, Automatic Ejecting, Double Action, Hammerless revolvers were manufactured from 1890 to 1940 in two receiver/frame sizes: a small receiver/frame and a large receiver/frame. The two receiver/frame sizes were noticeably different in weight, the length of the cylinder and the visual appearance of the back strap.
- the small receiver/frame version had a smooth, curved back strap. The large receiver/frame version had a noticeable square hump on the back strap.
- the large receiver/frame version was manufactured from 1890 to 1942.
- the small receiver/frame version was manufactured from 1899 to 1942.
- the small frame version was available with either a seven shot cylinder chambered for calibre 22 LR ammunition , or a five shot cylinder chambered for calibre 32 S&W ammunition.
- the small receiver/frame version is also known as the "Model 40".
- the large receiver/frame version was available with either a six shot cylinder chambered for calibre 32 H&R LONG ammunition, a six shot cylinder chambered for calibre 32 S&W LONG, or a five shot cylinder chambered for calibre 38 S&W ammunition.
- the large receiver/frame version is also known as the "Model 50" but is more accurately described in the Harrington & Richardson, Automatic Ejecting Variations six through 11.
- the model designation is normally not marked on the large receiver/frame version.
- features include: top break design; double action only trigger mechanism; blued or nickel finished receiver/frame and round ribbed barrel; internal hammer; fluted cylinder; automatic ejecting; fixed blade front sight with a fixed or adjustable rear sight; may have hard rubber or wooden grips.

Serial Number

- numeric serial number without a letter prefix located either on the left side of the grip frame, the bottom of the grip, or the underside of the top strap.

Calibre

- the calibre designation is normally marked on the barrel.

Canadian Law Comments

- firearms in the calibre of 32 H&R Long with a serial number under 20,000 qualify for antique status under Canadian Law.

Other Markings

- the Large Frame version may have the following markings:
- the barrel may have patent date markings which may include one or more of the following dates: Oct. 4, 1887, May 14, 1889, Aug. 6, 1889, May 14, 1889, Aug. 6, 1889, or Oct. 8, 1895.
- the model designation is normally marked on the left side of the barrel as, "AUTO EJECTING" with the calibre designation. Around serial number 320,000 the model designation was removed. The model designation may be marked as "AUTOMATIC".
