Canadian Law Comments

- This firearm may have left the factory equipped with a sound suppressor/silencer. The sound suppressor is subject to the definition of "Prohibited Device" in Section 84, Part III (Firearms and Other Weapons) of the Criminal Code of Canada.

If the complete sound suppressor/silencer (prohibited device) is removed, the firearm is correctly identified as a "Non-Restricted Firearm". NOTE: removal of the internal components of the sound suppressor/silencer (prohibited device) is not sufficient to mitigate a prohibited classification. All components of the sound suppressor/silencer, including the device body, end caps, mounting hardware, all internal parts (baffles, screens, spacers, wipes, etc.), must be removed.
- Discharges a projectile at a muzzle velocity exceeding 152.4 mps and a muzzle energy exceeding 5.7 Joules.

Notes

Make

- the make is marked on the firearm.
- "Richardson Industries" is branded into the wooden stock.

Model

- the model designation is marked on the firearm as "Guerrilla Gun",branded into the wooden stock.
- this is an extremely simple single-shot shotgun made after World War II, based on home-made shotguns that were used by resistance fighters during the Japanese occupation of South-East Asia.
- to use this shotgun, a live cartridge would be placed in the breech end of the removable sliding barrel, then the barrel assembly would be slid into the receiver/frame. At the desired time, the barrel would be pulled back sharply towards the receiver/frame, where a fixed firing-pin in a breech-plug would fire the chambered cartridge.
- features include: blued finish; brass rod front sight; aluminium breech-plug; solid wooden buttstock; and a knurled aluminium "safety" that screws into the right side of the receiver/frame to block the barrel movement.

Manufacturer

- the manufacturer is marked on the firearm.
- "Richardson Industries" is branded into the wooden stock.

Action

- "slam-bang"-type single-shot, with sliding removable barrel.

Serial Number

- may or may not be serial-numbered; observed example had a two-digit number electric-pencilled onto the receiver/frame and the breech-plug.

Calibre

- although this shotgun is nominally chambered for 12 GA x 2 3/4", it has no "chamber" as such, and may accept any 12 GA cartridge.

Notes

Make

- the make is not marked on the firearm; this make is derived from the name of the lead designer on this cannon.

Model

- the model is marked on the firearm, in Cyrillic, as "R-23"; the Cyrillic representation of "R-23" resembles "P-23".
- this is a highly-unusual aircraft cannon developed by Aron Rikhter in the early 1960s, and mounted on the Tupolev Tu-22 "Blinder" supersonic bomber in a gimbal tail mount as defensive armament.
- this cannon operates as a gas-operated revolver, aimed and fired via electrical control from the pilot's seat, and using unique cylindrical cartridges with tapered bases that are fed into and ejected from the front of the four-chambered cross-shaped cylinder.
- in this design, cartridges are carried into the cannon from the top left via a disintegrating belt, pushed rearwards into a chamber of the cylinder and rotated through the firing cycle by gas pistons functioned by gas from preceding shots; the cartridge is then fired electrically at the bottom position, and the gas from that shot is tapped off to rotate the cylinder to its last position and eject the empty case remaining in the cylinder from the previous shot out the front of the cylinder through an ejection chute.

Manufacturer

- manufacturer's name or logo is marked on the firearm.

Action

- this cannon operates as a gas operated, electrically-fired revolver, with a rate of fire of up to 2000 rounds per minute.

Firearms Reference Table, National Specialized Services, Royal Canadian Mounted Police. All rights reserved, RCMP, 1998-2026.

Serial Number

- serial number is usually found on the top rear of the receiver/frame or on the side of the receiver/frame at the chamber area.
- may have a letter prefix followed by three numbers.

- serial numbers can some times be used to indicate a manufacturer or distinct model.

Calibre

- "CAL.30 M1" may be marked on the receiver/frame.

Shots

- detachable box magazine.

Remarks

- manufacturer names, codes or serial numbers are the surest method of identifying these firearms. Identifying marks are to be taken from the receiver/frame only. Wartime production facilities used many parts manufactured by other carbine producers as well as numerous sub-contractors. Carbines were also often "arsenal refurbished", again making use of components for any number of different sources. Post war manufacturers also used many surplus military parts particularly in the early productions. As these parts ran out they began to use their own modern manufactured components. It is therefore possible to encounter a commercial carbine that will have military markings on some components as well as military manufactured firearms repaired or refurbished with modern commercial parts. Further commercial identification can be done with features such as finish or stock style and material. Specific forms of markings can be used to help identify rough dates of manufacture as well. The proliferation of modern accessory stocks, fitting, sights and other gadgets may also confuse the issue of specific model identification.
